> Green Globes New Construction

UNIVERSITY OF NORTH CAROLINA BENEFITS FROM GREEN GLOBES® STREAMLINED PROCESS

The University of North Carolina Charlotte turned to Green Globes when it sought green building certification on its new student residential building, Belk Hall. The building earned two Green Globes, becoming the first project to utilize Green Globes’ updated New Construction rating system, and the first publicly owned building in North Carolina to achieve Green Globes certification.

Brian Kugler, UNC Charlotte’s senior project manager in facilities management, says that Green Globes is a good choice for universities because it offers a lower cost, yet rigorous, option for certification. “We have a responsibility to the taxpayers,” explains Kugler. “We wanted to implement sustainable features that were best suited to the project, and Green Globes let us hone in on the items that were most relevant.”

Completed in August 2013, Belk Hall sits on the university’s urban research campus. The 175,000-square-foot facility contains 426 beds in the form of apartments and suites, and includes community kitchens, lounges and study rooms. Kevin Stover, Green Globes’ Commercial Programs Consultant cited Belk Hall’s attention to detail in the design and material selection process, including earning the maximum credit in the life cycle assessment performance path for core and shell materials. “The team clearly demonstrated their commitment to environmental excellence in materials and resources, as well as stellar performance in energy and water efficiency.”

“Green Globes offers a smooth question & answer review process and clear direction, and I really liked the fact that the assessor came to the site to confirm that items were actually implemented in the building.”

SARA ABRAMS, PROJECT ARCHITECT from Clark Nexsen
EFFICIENT AND COLLABORATIVE PROCESS

Architecture firm Clark Nexsen designed Belk Hall and architect Sara Abrams was highly involved in the Green Globes certification.

“It was very easy,” Abrams says. “There were no complicated templates, just a survey and construction documents and specifications. I divided parts of the survey among the appropriate parties, and that part of the process was useful because it encouraged us to talk across disciplines.”

Jason Jones, architecture department head at Clark Nexsen, wanted to maintain performance standards with a way to verify them, and he found that Green Globes distinguished itself through helpful feedback and personal follow-up. “Green Globes offers a smooth question-and-answer review process and clear direction, and I really liked the fact that the assessor came to the site to confirm that items were actually implemented in the building,” notes Jones.

After working directly with the assessor, Abrams was impressed at how available he was. “It was evident that he wanted to help,” she recalls. “During the site visit, our Green Globes Assessor saw things in the field that weren’t in our survey. He offered us suggestions and made sure we didn’t miss anything.”

Kugler also appreciates the way that Green Globes partners with projects to achieve certification. “I would definitely recommend this process to other universities. It offers a straightforward way for a building to meet performance requirements for certification without being cumbersome and costly.”

BELK HALL EARNED POINTS THROUGH GREEN GLOBES FOR:

- Recycled materials used in the furniture systems, carpets, Gypsum Wallboard, metal studs, and resilient tile; and products such as resilient tile flooring, rubber tile, and sheet carpeting that improved durability for longer life

- Development of a Building Life Service Plan to optimize long-term maintenance and improve sustainability over time

- Energy efficiency measures including large windows for daylighting in the common spaces, very high-performance glass, continuous insulation for thermal performance, occupancy sensors and a 95% efficiency condensing boiler

- Low-flow fixtures and aerators in the faucets and showers that helped the facility achieve a 49.4% water reduction

> GREEN GLOBES RATINGS

Once an assessment is verified by a third party, properties achieving a score of 35% or more receive a Green Globes rating based on the percentage of total points (up to 1,000) achieved.

85-100% (FOUR GREEN GLOBES)
Demonstrates national leadership and excellence in the practice of energy, water, and environmental efficiency to reduce environmental impacts.

70-84% (THREE GREEN GLOBES)
Demonstrates leadership in applying best practices regarding energy, water, and environmental efficiency.

55-69% (TWO GREEN GLOBES)
Demonstrates excellent progress in the reduction of environmental impacts and use of environmental efficiency practices.

35-54% (ONE GREEN GLOBE)
Demonstrates a commitment to environmental efficiency practices.
