ANSI/GBI 01-2019
GREEN GLOBES® ASSESSMENT PROTOCOL FOR
COMMERCIAL BUILDINGS

This Standard is under continuous maintenance by the Green Building Initiative (GBI) and has a published schedule for regular publication of revisions, including procedures for timely, documented, consensus action on requests for change to any part of the Standard. The change submittal form, instructions, and deadlines may be obtained in electronic form from the GBI website (www.thegbi.org). The latest edition of the ANSI/GBI 01-2019 Green Globes Standard is free to download from the Green Building Initiative website (www.thegbi.org).

© 2019 Green Building Initiative, Inc
Disclaimer

This Standard provides a method of assessing commercial buildings in relation to commonly valued environmental and efficiency outcomes. This Standard is an assessment tool and does not purport to instruct users on the appropriate design, construction, operations and maintenance, standards, applicable laws, codes or regulations for their building. The use of the Standard does not establish, expressly or implicitly, the appropriate standard of care of licensed design or other professionals nor the appropriate duties and responsibilities of owners, design, construction, operations or maintenance personnel.

The Green Building Initiative (GBI) does not guarantee or warrant the actual performance of any building as a result of (1) the use of this Standard, or (2) a particular level of assessment indicated through the use of this Standard, whether through individual use or in conjunction with a provider of a third-party assessment. The Standard has been developed and structured to provide a general assessment tool for various attributes of buildings, as outlined in the Standard. The Standard is not a design, construction, operations or maintenance tool or a quality or performance assurance system. Building systems, technology, construction processes, design methodologies and best practices are constantly evolving and no building performance assessment system or tool, including this Standard, can account for these changes or the site-specific variances and limitations associated with individual buildings. The use of this Standard does not serve as a substitute for the work and advice of knowledgeable, licensed design, and other professionals; skilled construction personnel; building operators; and dedicated building owners.

GBI makes no representations about the results to be obtained from using the Standard. GBI, to the fullest extent permitted by law, disclaims all warranties of any kind, whether express of implied, including, but not limited to, the implied warranties of merchantability, fitness for a particular purpose and non-infringement.

Information on the ANSI approved procedures used to develop this Standard can be found at www.thegbi.org or by emailing info@thegbi.org.

Special Notes

The Foreword, Appendix, Informational References and Recommended Documentation are informative only and do not contain mandatory requirements necessary for conformance to this Standard. As such, they may contain material that has not been subjected to public review or a consensus process.

Reference documents cited within the Standard are mandatory unless they are identified as being Informational References. Referenced documents are only to be applied within the context for which they are cited.

This Standard is maintained under continuous maintenance procedures. GBI publishes notices for meetings and calls for public comment in ANSI Standards Action as required. GBI has a list of stakeholders that will receive email announcements when any maintenance activity occurs to the recommended practice. GBI’s website contains a place for new stakeholders to register.

Comments or proposals for revisions to any part of the Standard may be submitted to GBI at any time. The following person(s) may be contacted by those interested in submitting changes:

Emily Marx, Manager, Standards & Program Support, Green Building Initiative, 7805 S.W. 40th St., #80010, Portland, OR 97219 (we prefer all correspondence be sent electronically), E-mail: comment@thegbi.org; Phone: 503.274.0448 x103.
FOREWORD

Note that the information contained in this Foreword is not part of this Standard. It does not contain requirements necessary for conformance to the Standard. The Foreword is not subject to public review.

The Green Building Initiative (GBI) is a nonprofit organization dedicated to delivering a results-driven process for achieving sustainability goals through a comprehensive, collaborative rating system with an emphasis on applicability over rigidity. Green Globes is reviewed through an American National Standards Institute (ANSI) consensus process. ANSI has helped develop private sector standardization systems for over 90 years, focusing on requirements for openness, balance, consensus and due process. We believe that green building certification should be flexible enough to encourage participation from every type of building. Our process encourages innovation while providing the most personalized green building certification experience in the market.

In 2005 GBI became the first building rating organization to become an ANSI Standards Developer. GBI used the ANSI process, recognized for being open, balanced, and consensus-based, to create ANSI/GBI 01-2010: Green Building Assessment Protocol for Commercial Buildings out of the Green Globes environmental design and assessment rating system for New Construction and Major Renovations.

GBI owns the global rights to Green Globes—a green commercial building rating system that combines education with environmental assessments within interactive online tools for new and existing buildings as well as major renovations. Green Globes isn’t here merely to set the bar for building performance, but rather to help its customers achieve success. Our third-party assessors personally visit properties to review progress toward compliance and certification, provide feedback on opportunities for improvement, and collaborate with project teams to ensure that buildings meet certification requirements and are on track to achieve sustainability goals. GBI has made the commitment to revise its Green Globes rating system using the ANSI consensus process and ANSI approved procedures.

The following document represents revisions to GBI 01-2010 as a result of over 800 public comments and over 200 public Subcommittee and Consensus Body meetings. The revised Standard became the rating system currently designated Green Globes NC 2019. The GBI maintains ANSI/GBI 01-2019: Green Globes Assessment Protocol for Commercial Buildings through a continuous maintenance schedule allowing for more frequent updates than the periodic maintenance schedule allows.

Stakeholder Involvement

GBI has encouraged public participation throughout the revision cycle beginning in 2014. All meetings of the Consensus Body are public. GBI accepts Consensus Body and Subcommittee applications year-round and maintains a queue of applicants to fill potential Consensus Body vacancies in three interest categories: User, Producer, and General Interest. The six Subcommittees are: Project Management & Energy, Site, Water Efficiency, Materials, Indoor Environment and Point Allocation. Subcommittee members are not required to also be members of the Consensus Body and individuals may serve on more than one Subcommittee. GBI’s Secretariat maintains an email list of interested Stakeholders used for updates on developments or opportunities to participate or comment. More information is available at www.thegbi.org/ANSI.

GBI Encourages Participation in Public Comment Periods

The public comment process is a critical element to developing an ANSI Standard. GBI encourages discussion and debate. ANSI consensus processes afford due process to every commenter. Commenters will receive communication from the Secretariat upon receipt of their comment and again following Consensus Body action on their comment. Public comment notices are published in ANSI Standards Action.
Comprehensive Not Rigid

One of the many strengths of the Green Globes’ collaborative process is that it allows for sustainability improvements that best fit each specific project, rather than a rigid checklist of requirements that don’t consider unique sites, building function, or innovation opportunities.

“Not applicables” play a prominent role in Green Globes’ flexibility, allowing projects to indicate criteria that are not applicable to a building or project. For instance, if a local code supersedes a criterion in the Standard and/or if optional features (e.g. cooling towers, etc.) are not included in the project scope, then those criteria could be marked Not Applicable removing those points from the denominator in determining percentages of points achieved.

The 1000 possible points are strategically allocated to direct projects toward criteria considered most critical in the reduction of a building’s environmental impacts, as well as criteria that maximize a building’s opportunity to have a positive impact on a community and its occupants. The new point distribution “weights” the Assessment Areas as follows:

- Project Management (100 points)
- Site (150 points)
- Energy (260 points)
- Water Efficiency (190 points)
- Materials (150 points)
- Indoor Environment (150 points)

The revised Standard, as is consistent with GBI-01-2010, does not contain mandatory criteria. Instead, additional weighting occurs within each Assessment Area to encourage pursuit of criteria considered to be most important. Every building that achieves Green Globes certification under these proposed revisions must achieve a minimum of 20% of points in each assessment area as well as a minimum of 35% of points overall.

Through point weightings, the Standard encourages users to strive to earn the highest number of applicable points for the building type, size, and budget, while using the flexibility built into the system to keep on track with the owners’ goals and objectives, the planned functionality for the building, and the potential for deconstruction or repurposing of the building. Project teams achieving One Green Globes level of certification (Level 1) on their first project—may strive for higher levels of achievement and recognition in future projects through their lessons learned. The Standard is designed to encourage and recognize incremental achievements that take buildings beyond minimum compliance requirements while incentivizing teams to innovate and strive for Levels 2, 3 or 4, thereby going beyond code to achieve real-world results.

Technical Advances

Reviewers of this revised Standard will find many notable improvements that advance the art, form and definition of what constitutes a green building. Discussion and debate through the public comment process have been extensive and important to this process. Highlights of the revised Standard are noted below.

Project Management
- Site and Building Resilience
- Moisture control analysis
- Two paths for Building Commissioning or Systems Manual & Training
Site
- Transportation
- Stormwater management
- Urban-wildland interface design

Energy
- Three paths provided for assessing energy performance
- Renewable energy clarified
- Sub-metering

Water Efficiency
- Four paths for Indoor Domestic Plumbing
- Alternate sources of water
- Metering

Materials
- Whole Building Life cycle assessment
- Construction waste
- Post Occupancy Solid Waste Recycling

Indoor Environment
- Air Ventilation and Quality,
- Thermal Comfort
- Acoustic Comfort

How to Submit Public Comments
Calls for public comment will be published in ANSI Standards Action. Anyone wishing to submit a comment will be asked to complete a public comment form located at www.thegbi.org/ANSI. To submit a proposal for a substantive change to the Standard commenters must be specific about the change they are requesting and provide a reason. Commenters are expected to copy and paste a section of the Standard into the comment form and use strikethrough and underline to identify suggested deletions and additions to the text.

Learn more about the public comment process or review GBI’s ANSI-approved procedures at www.thegbi.org/ANSI. For more information on upcoming calls for public comment or to request a public comment form, please contact the Secretariat at comment@thegbi.org.

Who Should Use This Standard
Property owners/operators, architects, green building consultants, design teams, developers, contractors, lenders, institutions, various levels of government, tenants, and occupants, as well as facility managers and maintenance personnel can apply this Standard to a broad range of commercial building types—such as office, multi-family, health care, schools, universities, labs, industrial, and retail. The Standard does not apply to single-family homes, two-family homes and townhouses that are three stories or less in height. These structures are covered in the ANSI/ICC 700 Standard developed by the National Association of Home Builders (www.nahb.com) and the International Code Council.

ANSI/GBI 01-2019: Green Globes Assessment Protocol for Commercial Buildings includes prescribed levels of achievement that government agencies or other entities wishing to establish specific criteria may consider when adopting this Standard. GBI also develops customized tools for governments to comply with government-specific requirements or other codes and standards. An example is GBI’s unique Guiding Principles Compliance program, which is customized for use by federal agencies for compliance with Executive Orders and “High Performance and Sustainable Building” mandates.
To learn more about current Green Globes tools, visit www.thegbi.org. To learn about participation in GBI’s Standard development and ANSI consensus processes, visit www.thegbi.org/ANSI or contact GBI’s Secretariat at comment@thegbi.org.

1. PURPOSE

This Standard provides a method for assessing commercial buildings relative to the tenets of integrated design and contemporary best practices for high-performance green buildings. This assessment method addresses the design and construction of buildings with respect to reducing life cycle resource consumption, waste, and global/regional/local environmental impacts; contributing to human and ecological system health; and providing performance feedback to owners and communities on indicators such as energy and water performance.

2. SCOPE

This Standard applies to a broad range of commercial building types, including offices, multi-family, health care, schools, universities, labs, industrial, retail, etc., as well as to major renovations as defined in Section 5 Definitions, Abbreviations, and Acronyms of the Standard. The Standard does not apply to single-family homes, two-family homes, and townhouses that are three stories or less in height.

The Standard includes a points-based assessment rating system that allows users to identify solutions that earn points for actions likely to achieve levels of performance commonly valued as having desirable environmental and related efficiency outcomes. The assessment criteria and rating system within the Standard apply to new commercial buildings and major renovations, including criteria related to planning for subsequent operations and maintenance.

The six Assessment Areas within the Standard include Project Management, Site, Energy, Water Efficiency, Materials, and Indoor Environment.

This Standard shall not be used to circumvent any code, health, safety, security, or environmental requirements. It is the sole responsibility of the user of this Standard to establish appropriate safety and health practices, to comply with required building codes, and to assess the applicability of criteria based on other possible regulatory limitations prior to use.

3. ACHIEVEMENT LEVELS, MINIMUMS, NOT APPLICABLES AND THIRD PARTY ASSESSMENTS

3.1 Achievement Levels

Levels of Achievement 1, 2, 3, and 4 are specified in Table 1 below.

<table>
<thead>
<tr>
<th>Levels</th>
<th>Percentage of Points Achieved Out of Applicable Points</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Level 4</td>
<td>85-100%</td>
<td>Demonstrates world-class leadership in resource efficiency and reduced environmental impacts.</td>
</tr>
<tr>
<td>Level 3</td>
<td>70-84%</td>
<td>Demonstrates outstanding leadership in resource efficiency and reduced environmental impacts and a commitment to continual improvement.</td>
</tr>
<tr>
<td>Level 2</td>
<td>55-69%</td>
<td>Demonstrates noteworthy progress applying best practices toward resource efficiency and reducing environmental impacts.</td>
</tr>
<tr>
<td>Level 1</td>
<td>35%-54%</td>
<td>Demonstrates movement beyond awareness and a commitment to resource efficiency and reducing environmental impacts.</td>
</tr>
</tbody>
</table>
3.2 Minimum Achievement Requirements

To achieve compliance in any of the four Levels, buildings must:

1. attain a minimum of 35% of applicable points out of the 1000 possible points available; and
2. attain a minimum percentage of points in each environmental assessment area as denoted in Table 2.

Where calculations are used to determine points achieved, round to the nearest whole number.

<table>
<thead>
<tr>
<th>Environmental Assessment Area</th>
<th>Total Points Available</th>
<th>Minimum Percentage of Points Required For Compliance at the First Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Project Management</td>
<td>100</td>
<td>20% of applicable points</td>
</tr>
<tr>
<td>Site</td>
<td>150</td>
<td>20% of applicable points</td>
</tr>
<tr>
<td>Energy</td>
<td>260</td>
<td>20% of applicable points</td>
</tr>
<tr>
<td>Water Efficiency</td>
<td>190</td>
<td>20% of applicable points</td>
</tr>
<tr>
<td>Materials</td>
<td>150</td>
<td>20% of applicable points</td>
</tr>
<tr>
<td>Indoor Environment</td>
<td>150</td>
<td>20% of applicable points</td>
</tr>
<tr>
<td>Total</td>
<td>1000 (less Not Applicable points)</td>
<td></td>
</tr>
</tbody>
</table>

3.3 Not Applicable Criteria

Each environmental assessment area contains certain criteria that a design and delivery team may deem to be “Not Applicable” to the building. Selecting “Not Applicable” may be appropriate in the following circumstances as denoted in Table 3:

<table>
<thead>
<tr>
<th>Reasons for Use of Non-applicable Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>If a criterion does not apply to the building type (e.g., if there are no oil fired burners on site, questions related to oil fired burners would be designated Not Applicable).</td>
</tr>
<tr>
<td>2</td>
<td>If a code or regulation overrides, conflicts with, or otherwise prevents compliance with a criterion.</td>
</tr>
<tr>
<td>3</td>
<td>If a criterion conflicts with best practices based on regional climatic differences.</td>
</tr>
</tbody>
</table>

Questions without a Not Applicable option should be answered as appropriate for the building.

4. ASSESSMENT OF COMPLIANCE

Assessment of compliance with a specific Level of Achievement (Table 1) can be established through a third-party review of appropriate written plans, working drawings, specifications, site plans, energy modeling, life cycle assessment results, commissioning reports, construction documents and/or other data or documents that demonstrate conformance.

Items from the “Recommended Documentation” list at the end of each area of compliance in this Standard are typical documents that providers of the third-party assessment will use prior to, or in conjunction with, a post-construction site
visit and walk-through to assess compliance, although additional documentation may be requested or substituted prior to, or during, the on-site visit.

5. DEFINITIONS, ABBREVIATIONS, AND ACRONYMS

5.1 Definitions

Note: Italicized words found throughout this Standard indicate that a definition for the term can be found in the Definitions Section. Definitions not found in this section may be found in referenced standards contained in this Standard, and the user shall adhere to the meanings as defined in those standards. Other terms not defined in this Section or in referenced standards contained in this Standard shall have their ordinarily accepted meanings within the context in which they are used. Ordinarily accepted meanings are based upon American Standard English language usage as documented in a comprehensive dictionary. Where definitions in this Standard differ from those in a reference standard or any other source, definitions found in this Standard shall be used.

- acoustically separated area: an enclosed space that, to function properly, requires separation from other adjacent spaces by wall, floor, and ceiling assemblies that have an STC rating adequate to allow clear, intelligible communication between sender and receiver within the space (e.g. meeting rooms, auditoria, theaters, concert venues, cinemas, lecture halls, libraries, classrooms, conference rooms, counseling offices, private offices, private rooms in health care facilities, sleeping rooms, etc.).

- article: a manufactured item which:
  a.) is formed to a specific shape or design during manufacture;
  b.) has end use function(s) dependent in whole or in part upon its shape or design during end use; and
  c.) has either no change of chemical composition during its end use or only those changes of composition which have no commercial purpose separate from that of the article, and that result from a chemical reaction that occurs upon end use of other chemical substances, mixtures, or articles; except that fluids and particles are not considered articles regardless of shape of design.

- assemblies: building systems categorized as exterior walls, internal partitions, windows, interim floors, roofs, beams, and columns.

- alternate water source(s): non-potable water resources or water supplies not developed for potable use.

- autoclaves: (see steam sterilizers).

- baseline equivalent emission rate (BER): the baseline building emission rate (BER) represents the mass carbon dioxide equivalent (CO2e) emitted for the average U.S. commercial building in the proposed building’s location when using data from the U.S. Department of Energy’s Energy Information Administration’s (EIA) “Commercial Building Energy Consumption Survey (CBECS).” The BER is expressed as the mass of CO2e emitted per year per unit area of the total useful floor area of a building – lb./ft²/yr. (kg/m²/yr.).
biobased content: that portion of a material or product derived from plants and other renewable agricultural, marine, and/or forestry resources. *Biobased content* does not include animal feed, food, or biofuels.

boilerless/connectionless food steamers: an appliance designed to cook food within an enclosure via steam-laden air that does not have a dedicated connection to a water supply.

brownfield: real property, the expansion, redevelopment, or re-use of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant (Some legal exclusions and additions may apply).

building commissioning: a process for enhancing the delivery of a project. The process assesses and documents that the facility, systems, and/or assemblies are planned, designed, installed, tested, and can be operated and maintained to meet the Owner’s Project Requirements.

building envelope: the element of a building that separates the conditioned interior space from the exterior, such as walls, roofs, floors, slabs, foundations, doors, and *fenestration*.

building product: building elements and *assemblies*.

building resilience: the ability of a building and project site to withstand and recover rapidly from adverse events and to adapt to changing environmental conditions.

C-factor *(thermal conductance)*: the amount, in British Thermal Units (Btu), that flows each hour through 1 ft² of the surface area of material when there is a 1° temperature difference between the inside and outside air Btu/hr-ft²-F.

carbon dioxide equivalent (CO2e): a measure used to compare the impact of various greenhouse gases based on their *global warming potential* (GWP). CO2e approximates the time-integrated warming effect of a unit of a given greenhouse gas, relative to that of carbon dioxide (CO₂). GWP is an index for estimating the relative global warming contribution of atmospheric emissions of a unit mass of a particular greenhouse gas compared to the emission of a unit mass of CO₂.

carbon offset: a certificate representing the reduction of one metric ton (2,205 lbs.) of *carbon dioxide equivalent* emissions.

cartridge filtration: a removable type of filtration unit containing media. Cartridge filters are removed and cleaned or replaced as a unit in entirety.

CAS number: assignment by the Chemical Abstracts Service (CAS), a division of the American Chemical Society, which assigns numbers to chemicals to allow for database searches. Most molecule databases allow searching by *CAS number*.

charrette: a collaborative session in which a project team creates a solution to a design or project problem. The structure may vary, depending on the complexity of the problem or desired outcome and the individuals working in the group. *Charrettes* can take place over multiple sessions in which the group divides into sub-groups. Each sub-group then presents its work to the full group as material for future dialogue. *Charrettes* can serve as a way of quickly generating solutions while integrating the aptitudes and interests of a diverse group of people.

clear views: direct, unobstructed visual sightlines from a seated or standing position inside the building to a point at least 20 ft. (6.1 m) outside the building allowing occupants exposure to sunlight and a visual connection to nature and the outdoors. Adjustable shading devices for glare control shall not be considered an obstruction.

clothes washer:
- commercial clothes washer: a front-loading or top-loading clothes washer designed for use in applications in which the occupants of more than one household will be using the clothes washer, such as multi-family housing common areas or laundromats.
- multi-load clothes washer: a clothes washer with a bulk capacity generally equal to or greater than 25 lbs. (11.33 kg) of laundry; used in commercial laundromat operations and multi-family common areas for tenant use and are coin- or card-operated.
- single-load clothes washer: a clothes washer with a bulk capacity less than 25 lbs. (11.33 kg); typically termed “family-sized” and found in dwelling units, commercial laundromats, and multi-family common areas for tenant use. Except for those located within dwelling units, SLWs are typically coin- or card-operated.
- tunnel washer: an industrial laundry machine design specifically to accommodate heavy wash loads; also called a continuous batch washer. In operation, laundry progresses through the washer in one direction, while water and washing chemicals move through in the opposite direction on a continuous basis.

combination oven: an appliance designed to cook food within an enclosure via hot air convection and steam-laden air.

conceptual design phase: a document that records the concepts, calculations, decisions, and product selections used to meet the owner’s project requirements and to satisfy applicable regulatory requirements, standards, and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process.

construction documents: all of the written and graphic documents (including BIM, CAD, and other electronic files) prepared or assembled by the architect/engineer for communicating the design and administering the project. The term “Construction documents” also includes the Project Manual that contains the bidding forms and instructions, contract forms and conditions, and specifications, as well as documentation of all modifications made after the construction agreements are signed.

construction documents phase: the last stage of the design process. The design and delivery team is focused on finalizing the drawings and specifications for all components and systems of the building producing the Contract Documents. A complete set of Contract Documents provides a comprehensive, fully coordinated set of construction documents and specifications that the contractor uses to obtain necessary permits and construct the project.

conventional filtration: sorptive media filtration (e.g., with perlite or diatomaceous earth) in which regular backflushing is done with each filter cleaning and the media is replaced after each flush. In conventional filtration, the media is mixed in a slurry process inside the filter and deposited on fabric coated tubes in the pressure vessel.

counterflow systems: an evaporative cooling system in which the flow of air is upward across the wetted cooling media.

cradle-to-gate product life cycle: a partial product life cycle from resource extraction (cradle) to the factory gate before the product is transported to the consumer. This includes the product stages or raw material supply, transport, and manufacturing. The construction process, use, and end-of-life stages of the product are omitted in this case.

cradle-to-grave product life cycle: the full product life cycle from resource extraction (cradle) through the disposal stage (grave). This includes the product, construction process, use, and end-of-life stages.
crossflow system: an evaporative cooling system in which the flow of air is horizontal across the wetted cooling media.

daylighting: the integration of natural light for an enhanced connection to nature and to minimize the need for artificial lighting during the day using strategies such as effective orientation and placement of windows, use of light wells, light shafts or tubes, skylights, clerestory windows, light shelves, reflective surfaces, and shading, and the use of interior glazing to allow light into adjacent spaces.

deconstruction: the systematic dismantling and removal of a structure or its parts to salvage and harvest the components, for the purpose of reusing and recycling the reclaimed materials for their maximum value; the disassembly of a building with the explicit intent of recovering building materials for safe and economical reuse.

design development phase: refines the scope of work previously approved in the schematic design phase. In this phase, the project is developed to a level of detail necessary to work out a clear, coordinated description of all aspects of the project. Major elements including equipment, fire protection, mechanical, electrical, structural, telecommunications and plumbing systems are designed and coordinated through enlarged scale drawings, detailed elevations, and plans, and design mockups as required.

direct lighting: lighting provided from a source without reflection from other surfaces, which allows light to travel on a straight path from the light source to the point of interest, such as ceiling-mounted or suspended luminaires with mostly downward light distribution characteristics.

drift eliminator: structure to control water lost from cooling towers as liquid droplets are entrained in the exhaust air. A drift eliminator does not prevent water lost by evaporation.

drip irrigation: any non-spray, low volume irrigation system utilizing emission devices with a flow rate measured in gallons per hour (gal/hr.) or liters per hour (L/hr.). Low volume irrigation systems are specifically designed to apply small volumes of water slowly at or near the root zone of plants.

drought tolerant plant: a plant that can withstand long periods with little or no water and/or that have relatively low water requirements.

dry vacuum system: a system that does not use water to form a seal for a vacuum pump or use flowing water to create a vacuum.

existing building: a building or portion thereof that was previously occupied or approved for occupancy by the authority having jurisdiction.

exterior vegetated space: outside the building footprint and paved areas. Applies only to sites where the site is vegetated with plants that are native, adapted to the ecosystem and/or non-invasive.

fenestration: all areas (including frames) in the building envelope that transmit light including windows, translucent panels, clerestory windows, skylights, and glass block walls. For doors where the glazed vision area is less than 50% of the door area, the fenestration area is the glazed vision area. For all other doors, the fenestration area is the door area (including frames).

fenestration area: total area of the fenestration measured using the rough opening and including glass, sash, and frame.

F-factor: the perimeter heat loss factor for slab-on-grade floor, expressed in Btu/hr-ft-°F (W/m-K).
**food waste disposer**: a device used to shred food and other kitchen wastes prior to disposal.

**formulated product**: any combination or blend of two or more constituent chemicals if the combination does not occur in nature and is not, in whole or in part, the result of a chemical reaction.

**furnishings, finishes, and fit-outs**: products and materials permanently installed on the interior of a building. This definition includes casework, shelving, and cabinets as well as finish materials used on floors, walls and ceilings. This definition does not include moveable furniture such as desks, tables, and chairs.

**global warming potential (GWP)**: an index, describing the radiative characteristics of well-mixed greenhouse gases, that represents the combined effect of the differing times these gases remain in the atmosphere and their relative effectiveness in absorbing outgoing infrared radiation. This index approximates the time-integrated warming effect of a unit mass of a given greenhouse gas in today’s atmosphere, relative to that of carbon dioxide. (See carbon dioxide equivalent).

**graywater**: Untreated waste water that has not come into contact with toilet waste, kitchen sink waste, dishwasher waste or similarly contaminated sources. *Graywater* includes waste water from bathtubs, showers, and bathroom wash basins, *clothes washers* and laundry tubs.

**greenfield**: undeveloped lands such as fields, forests, farmland or rangeland.

**grid displaced electricity**: all electricity generated in or on the building site by, for example, PV panels, wind-power, combined heat and power systems (CHP), or similar systems.

**impervious hardscape area**: a hard surface area (e.g., parking lot) that prevents or retards the entry of water into the soil, thus causing water to run off the surface in greater quantities and at an increased rate of flow.

**indoor environmental quality**: refers to the quality of the air and environment inside buildings, based on pollutant concentrations and conditions that can affect the health, comfort, and performance of occupants—including temperature, relative humidity, light, sound and other factors.

**integrated design process (IDP)**: a holistic approach to project design and planning where project team members from multiple disciplines work together throughout the project design and delivery process; this emphasizes goal setting, clear and ongoing communication, attention to detail, and active collaboration among team members with the objective of achieving holistic solutions.

**integrated pest management**: the use of different techniques to control pests, used singly or in combination, such as selection of pest-resistant plant varieties, regular monitoring for pests, use of pest-resistant materials or use of natural predators of the pest, to control pests, with an emphasis on methods that are least injurious to the environment and most specific to the particular pest.

**landscape irrigation sprinkler(s)**: hydraulically operated mechanical device that discharges pressurized water into the air through a nozzle(s) as a spray or stream of water.

**lavatory**: a washbowl or basin plumbing fixture supplied with water from a *lavatory faucet* located within the confinements of a bathroom or toilet room and used for the sole purpose of personal hygiene.

**lavatory faucet(s)**: a fitting that controls the flow of water into a *lavatory*. 

© Green Building Initiative, Inc. (www.thegbi.org). For personal use only. Additional reproduction, distribution or transmission in either print or digital form is not permitted without Green Building Initiative's prior written permission.
light pollution: any adverse effect of artificial light including sky glow, glare, light trespass, light clutter, decreased visibility at night, and energy waste.

luminaire: a complete lighting unit, consisting of an artificial light source(s) together with the components required to mount the unit and distribute the light, position the light source, and connect the light source to a power supply (often referred to as a “fixture”).

major renovation: has occurred when 50% of the gross area (measured to the exterior footprint) of the building has been renovated.

makeup water: water added to a cooling tower for water replenishment or water quality maintenance in a cooling tower, evaporative cooler, humidifier, fountain, pool, or other items in which water is continually depleted or used during operation.

mature plant: a full-grown plant or the size of the plant after a specified period once the plant becomes established.

meter (or sub-meter): an instrument used to measure the volume and/or rate of flow of water in a conduit or channel.

modular construction: the remote assembly of major portions of a building constructed of multiple material types involving several trades working together to build a modular unit such as a bathroom pod, patient room pod, or a wall/floor/roof assembly including HVAC, electrical, and plumbing components.

mulch: a layer of permeable material applied to the surface of a landscape area to help conserve soil moisture, improve soil health, discourage weed growth and enhance visual appeal.

multi-load: (see clothes washer)

neighborhood asset(s): a single physical location where business transactions or services are available to the public. Neighborhood assets include, but are not limited to grocery stores, banks, retail outlets, and nonprofit and public services such as religious facilities, schools, parks, police and fire stations, and government offices.

non-potable water: water that is not potable water (see potable water).

non-structural element(s): elements attached to or housed in a building or building system, that are not part of the main load-resisting structural system of the building. These include:
  1. architectural elements such as a parapet wall, partition wall, non-load carrying windows, suspended ceilings, furnishings, cladding systems, and veneer;
  2. mechanical system components;
  3. electrical system elements; and
  4. miscellaneous components, such as sign boards and file cabinets.

off-site renewable energy: green power or Renewable Energy Certificates (RECs) purchased from a third-party source such as an electrical utility. There is no physical renewable energy system either on site or specifically connected to the building.

once-through water-cooled equipment: equipment that uses a heat exchange process for cooling only once before discharge of the water to a drainage system.
on-site renewable energy: energy derived from sun, wind, water, the Earth's core, and various forms of biomass from recovered waste sources that is captured, stored and used on the building site, using such technologies as wind turbines, photovoltaic solar panels, transpired solar collectors, solar thermal heaters, and small-scale hydroelectric power plants.

orientation: the relation of a building and its associated fenestration and interior surfaces to compass direction and, therefore, to the location of the sun, usually given in terms of angular degrees away from the south, (e.g., a wall facing due Southeast has an orientation of 45 degrees east of south).

overhang: a horizontal projection for a window or wall.

ozone depletion potential (ODP): a number that refers to the amount of ozone depletion caused by a substance. The ODP is the ratio of the impact on ozone of a chemical compared to the impact of a similar mass of CFC-11. Thus, the ODP of CFC-11 is defined to be 1.0. Other CFCs and HCFCs have ODPs that range from 0.01 to 1.0. The halons have ODPs ranging up to 10. Carbon tetrachloride has an ODP of 1.2, and methyl chloroform's ODP is 0.11. HFCs have zero ODP because they do not contain chlorine. Manufacturers publish tables of all ozone depleting substances showing their ODPs, GWPs, and CAS numbers.

permeable pavement(s): infiltrate, treat, and/or store rainwater where it falls. They can be made of pervious concrete, porous asphalt, or permeable interlocking pavers.

pervious concrete: allows some or all water to penetrate the concrete assembly

porous asphalt pavement(s): allows some or all water to penetrate the asphalt assembly.

post-consumer recycled content: the portion of recycled material, in a product, generated by households or by commercial, industrial and institutional facilities in their role as end-users of the product which can no longer be used for its intended purpose. Post-consumer recycled content includes returns of materials from the distribution chain.

potable water: water that meets the requirement of the authority having jurisdiction and is satisfactory for drinking, culinary, and domestic purposes.

pre-consumer recycled content: the portion of recycled material in a product diverted from the waste stream during a manufacturing process. Materials that have been reutilized (i.e., reworked, reground, or scrap generated in a process and capable of being reclaimed within the same process that generated it) are excluded.

pre-design: the activities that happen during or prior to the conceptual/schematic design phase of the project.

prefabrication: off-site, custom fabrication of major building elements in specialized facilities, in which various materials are joined to form a component part of a final installation. Examples include trusses, joists, structural steel fabrications, architectural casework, curtain wall, and precast concrete. This does not include manufactured, multi-material components such as windows, doors, and gypsum sheathing unless they are incorporated into a prefabricated building element.

pre-rinse spray valve(s): a handheld device, used with commercial dishwashing and warewashing equipment and applications, that sprays water on dishes, flatware, and other food service items to remove food residue before cleaning and sanitizing the items.
pressure regulation: a device used to maintain a constant, desired down-stream water pressure in a pipeline or emission device.

previously developed site: land that is or was occupied by a permanent structure (excluding agricultural or forestry buildings), and associated fixed surface infrastructure.

primary [regularly] occupied space: a room or enclosed space designed for human occupancy in which individuals perform activities for which the space has been specifically designed.

product formulation: any combination or blend of two or more constituent chemicals, if the combination does not occur in nature and is not, in whole or in part, the result of a chemical reaction.

proposed equivalent emission rate (PER): PER is expressed as the mass of CO2e emitted per year per unit area of the total useful floor area of the proposed building – lb./ft²/yr. (kg/m²/yr.).

R-value: indicates the resistance to heat flow (thermal resistance) of a material. The R-value of thermal insulation depends on the type of material, its thickness, and its density. The higher the R-value, the greater the insulating effectiveness. In calculating the R-value of a multi-layered installation, the R-values of the individual layers are added.

rain shutoff device: a device connected to an irrigation controller that overrides scheduled irrigation when significant precipitation is detected.

rainwater: untreated water from natural precipitation that has not been contaminated by use. Can be utilized through rainwater harvesting.

rainwater catchment: collection and conveyance of precipitation from a rooftop or other constructed, above ground collection surface.

rainwater harvesting: utilizing rainwater for potable, non-potable, industrial or irrigation applications.

reclaimed [recycled] water: highly treated wastewater that can be used for irrigation or other non-potable uses to extend water supplies.

recovered [reclaimed] material: material that would have otherwise been disposed of as waste or used for energy recovery (e.g., incinerated for power generation), but has instead been collected and recovered as a material input, in lieu of virgin primary material, for recycling or a manufacturing process.

recycled content: proportion, by mass, of recycled material in a product or packaging. Only pre-consumer and post-consumer recycled materials are considered to be recycled content (see recycled material).

recycled material: materials that have been diverted from the waste stream and reprocessed and remanufactured to form part or all of a new product.

regenerative sorptive media: filtration media capable of filtering down to 5 microns, that is usually composed of diatomaceous earth or perlite but that is unique in that it is not back-washed and replace after each use, but rather agitated off of filter tubes and then recoated on the filter. In addition to only needing occasional replacement, filtration processes using this type of media are much more water efficient.
remediation: cleanup or other methods used to remove or contain a toxic spill, contamination or hazardous material.

renewable energy: energy that is continuously replenished on the Earth, such as wind, solar thermal, solar electric, geothermal, hydropower, and various forms of biomass from recovered waste sources.

Renewable Energy Certificates (RECs): renewable energy certificates (RECs) also known as renewable energy credits, green certificates, green tags, or tradable renewable certificates, represent the environmental attributes of the power produced from renewable energy projects and are sold separately from commodity electricity. Customers can buy green certificates whether or not they have access to green power through their local utility or a competitive electricity marketer and they can purchase RECs without having to switch electricity suppliers.

renovation: changing in-kind, strengthening, refinishing, or replacing of structural elements or upgrading of existing materials, equipment and/or fixtures.

reuse: to use an object, material or resource again, either for its original purpose or a similar purpose, without significantly altering the physical form of the object or material.

risk: the probability that a product formulation, article or constituent chemical will cause an unacceptable hazardous or toxic human health or safety, or ecological effect under the intended exposure and use conditions.

risk assessment, product: a scientific product composition screening-level analysis that determines if a product formulation, article, or constituent chemical will produce a risk, based upon constituent hazards, dose and exposure assessments, and risk characterization.

risk characterization ratio (RCR): the quantitative probability estimate for adverse effects (i.e., toxicity) to occur under defined exposure conditions – calculated as $RCR = \frac{exposure\ dosage}{no\ adverse\ effects\ dosage}$, with $RCR$ values < 1.0 indicating the risk is adequately controlled.

salvaged material: discarded or unused construction materials or products removed from a structure or a site that have value and can be directly substituted for new materials or products with minimal reprocessing.

sand-based filtration: filtration that does not utilize a sorptive media (such as diatomaceous earth or perlite) and does not filter down to 5 microns.

service life: the expected lifetime of a product.

shared use [multi-user] path: a form of infrastructure that supports multiple non-motorized transportation opportunities, such as walking, bicycling and inline skating. A multi-use path is physically separated from motor vehicular traffic with an open space or barrier.

sidelit daylighted area: the perpendicular area from the glazing into the space that is determined by either:
  1. a distance of 15 ft. (4.6 m) or
  2. the perpendicular distance from the glazing to the nearest partition that is 5 ft. (1.5 m) or higher multiplied by the smaller of either:
     a. the width of the window plus 2 ft. (0.6 m) on both sides,
     b. the width of the window plus the distance to a permanent partition, or
     c. the width of the window plus one-half the distance to the closest skylight or vertical glazing.
single load: (see clothes washer)

Smart Water Application Technology (SWAT): a national initiative of water providers and irrigation industry representatives to promote landscape water-use efficiency through the application of state-of-the-art irrigation technologies.

soil moisture sensor: a device to measure the moisture level in the soil and which is, in some instances, connected to an irrigation system to signal the bypass of the scheduled irrigation cycle if the soil moisture is above a specified level.

specialized activities: activities that generate pollutants, that may include but are not limited to, printing rooms, and areas that contain industrial and quasi-industrial equipment.

splash out trough: the channel located around the edge of a pool that is designed to catch water that otherwise would spill or be tracked out of the pool onto the decking. The splash out trough drains back to the pool system.

steam sterilizer [autoclave]: a device that uses moist heat in the form of saturated steam under pressure for a predetermined period of time to sterilize materials.

stormwater: natural precipitation that has contacted a surface at, below (channels storm drain pipes), or above (elevated roadways) grade.

structural system: the load-resisting system of a structure that transfers loads to the soil or supporting structure through interconnected structural components or members.

sub-meter: a subdivision of the utility metering of a building that records the proportionate energy use of specific building systems and appliances.

substantial completion: the stage in the progress of a construction project when the project or designated portion thereof is sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the project for its intended use.

Superfund site: a site that is on the U.S. Environmental Protection Agency’s (EPA) National Priority List (NPL) based on a scoring process that rates its current or potential health impact.

task lighting: light that is directed to a specific surface or area to provide illumination for visual tasks.

toplit daylighted area: the actual perimeter of the rough glazing unit or skylight opening to a point expanding outward from each side to a distance of 70% of the ceiling height. Areas of overlap with toplit daylighted area or sidelit daylighted area can only be applied to one area. Light obstructed by a permanent partition that is 5 ft. (1.5 m) high or taller is not considered as part of the toplit daylighted area.

Total Material Value: the invoiced cost of materials and products as received by the contractor, permanently installed in the building project, not including the contractor’s profit, overhead, or labor. Alternatively, 45% of the total construction cost may be used to establish the Total Material Value.

Tree Protection Zone (TPZ): an area established to minimize damage to trees and their root systems. The TPZ is determined by measuring the diameter of the trunk at a standard height of 4.5 ft. (1.37 m) above the ground line and a
radius from the tree trunk is extended 1.5 ft. (.46 m) for each inch (2.54 cm) of trunk diameter. For example, if the tree trunk is 10 in. (25.4 cm) at 4.5 ft. (1.37 m) above the ground line, then the TPZ radius would extend 15 ft. (4.57 m) from the tree trunk in all directions.

**U-factor (thermal transmittance):** the heat transmission in unit time through unit area for all the elements of construction and the boundary air films, induced by unit temperature difference between the environmental conditions on each side. Btu/hr-ft²-°F (W/m²-K).

**variable air volume (VAV) system:** an HVAC system that provides temperature control by varying the supply of conditioned air in different parts of the building according to heating and cooling needs. The air supply temperature may be constant or varied (also according to heating and cooling needs).

**variable occupancy:** a variance of 30% from design occupancy for a minimum of 30% of normally occupied hours.

**vegetated roof:** a roof system that may include a water proofing and root repellant system, a drainage system, filter cloth, a lightweight growing medium, and plants. **Vegetated roof** systems can be modular, with drainage layers, filter cloth, growing media and plants already prepared in movable, interlocking grids or each component can be installed separately.

**waste heat:** waste heat from industrial processes and power stations rated at more than 10MWe and with a power efficiency of greater than 35%.

**water factor (WF):** the quotient of the total weighted per-cycle water consumption for cold wash divided by the cubic foot (or liter) capacity of the **clothes washer**.

**water features:** a designated, often artificial, area in which visible water is moving or open for some purpose. While often this is for aesthetic purposes, these areas may have multiple uses. Generally, the term applies to places not used exclusively for irrigation.

**water tempering device:** a device that cools a discharge of hot water or steam to the sanitary sewer by dilution (mixing) with cooler water.

**wetland:** natural or constructed areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs and similar areas.

ENVIRONMENTAL ASSESSMENT AREAS

6. PROJECT MANAGEMENT (100 points)

6.1 Team & Owner Planning (45 points)

6.1.1 Performance & Green Design Goals

<table>
<thead>
<tr>
<th>6.1.1.1 Performance and green design goals (qualitative AND/OR quantitative) are established in collaboration with the owner in writing and are regularly assessed from pre-design through to completion of construction and occupancy for the following listed items:</th>
<th>Maximum = 20 points</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Site design;</td>
<td>• One point is earned for each written performance and green design goal for listed items at pre-design to a maximum of eight points.</td>
</tr>
<tr>
<td>• Environmentally responsible construction activities;</td>
<td>• One point is earned for evidence of each design stage review and assessment of goals prior to:</td>
</tr>
<tr>
<td>• Water conservation, efficiency, alternate water sources, and reuse;</td>
<td>o Conceptual design</td>
</tr>
<tr>
<td>• Building envelope and moisture control;</td>
<td>o Design development</td>
</tr>
<tr>
<td>• Energy efficiency;</td>
<td>o Construction documents.</td>
</tr>
<tr>
<td>• Materials including:</td>
<td>• One point is earned for evidence of each construction stage review and assessment completed at:</td>
</tr>
<tr>
<td>o Efficiency;</td>
<td>o Pre-construction</td>
</tr>
<tr>
<td>o Environmentally preferable products; and</td>
<td>o 25% completion</td>
</tr>
<tr>
<td>o Storage of hazardous materials;</td>
<td>o 50% completion</td>
</tr>
<tr>
<td>• Indoor environment including:</td>
<td>o Substantial completion.</td>
</tr>
<tr>
<td>o Acoustic comfort;</td>
<td>• Five points are earned for a written plan and contract for post-occupancy review and assessment.</td>
</tr>
<tr>
<td>o Thermal comfort;</td>
<td></td>
</tr>
<tr>
<td>o Lighting;</td>
<td></td>
</tr>
<tr>
<td>o Air quality; and</td>
<td></td>
</tr>
<tr>
<td>• Building resilience.</td>
<td></td>
</tr>
</tbody>
</table>

Assessment criteria:

*Pre-design* written goals

Design stage review and assessment of goals prior to:

- Conceptual design phase
- Design development phase
- Construction documents

Construction stage review and assessment of goals at:

- Pre-construction
- 25% completion of budget or schedule
- 50% completion of budget or schedule
- Substantial completion

Occupancy assessment of goals:

- Owner obtains a contract for Facility Performance Evaluation or Post-Occupancy Study to evaluate how the building meets the original and emerging goals and requirements within 18 months of being occupied.
### 6.1.2 Integrated Design Process

**6.1.2.1** Employ an *Integrated Design Process (IDP)* with evidence of comprehensive *pre-design*, design phase, and construction phase planning and coordination.

Job functions involved in the IDP include but are not limited to the following:
- Architect;
- *Building Envelope* Specialist;
- Civil Engineer;
- Commissioning Agent;
- Community Representative;
- Electrical Engineer;
- Energy Engineer;
- Facilities Manager;
- General Contractor/Construction Manager:
  - Specialty Contractors;
- Interior Designer;
- Irrigation Designer;
- Landscape Architect or Designer;
- Lighting Designer/Illuminating Engineer;
- Mechanical Engineer – Plumbing, HVAC, AND/OR Refrigeration;
- Owner’s Representative;
- Structural Engineer;
- Sustainability Consultant; AND/OR
- User Group Representative.

<tr>
<td>Final Budget or Guaranteed Maximum Price (GMP) Review with the expectation of an in-depth review of the consequences of the decisions made on the project sustainability goals</td>
<td>1</td>
<td>3</td>
</tr>
</tbody>
</table>

**Maximum = 14 points**

The following points are earned when a minimum of the listed job functions or groups were represented at the following milestones or during the following project phases:

### 6.1.3 Site and Building Resilience

**6.1.3.1 Building Risk Assessment:** An assessment identifying risks to the building including continued building occupancy resulting from extreme natural events, global climate change, and human activity for the expected *service life* of the building has been conducted and provided to building owners.

3 points
and designers. The assessment identifies hazards and evaluates the probability and severity of occurrence of those events. These hazards include, but are not limited to, weather, flooding, seismic and volcanic events, drought, wildfire, soil stability, and terrorism.

</tr>
<tr>
<td>- Two points are earned for documenting the items listed in 6.2.1.1.3.</td>
</tr>
</tbody>
</table>
checklists, inspections, and records of compliance).
  
  - Indicates how this information is passed along to project personnel and sub-contractors;
  - Describe continuous reporting mechanism;

- **6.2.1.3**: Project Ecological and Health Risk Assessment:
  - An assessment is conducted prior to the start of construction to identify major risks that could impact the general welfare and health of humans (i.e., residents, workers, visitors, and construction trades people) and the ecological environment surrounding the immediate area of construction for the specific project and local agency requirements;

- **6.2.1.4**: A construction management policy prohibits smoking within 25 ft. (7.62 m) of the building perimeter and construction zone during the construction phase.
  - Smoking is defined as the inhalation of smoke from burning tobacco, use of electronic-cigarettes, or other substance encased in items such as, but not limited to, cigarettes, pipes, and cigars for recreational or medical use.

(Continued from 6.2.1.4)

6.3 Life Cycle Cost Analysis or Building Service Life Planning (12 points)

Two paths are available for assessing Life Cycle Cost Analysis or Building Service Life Planning.

- **Path A: Life Cycle Cost Analysis**: 12 points
  
  **OR**

- **Path B: Building Service Life Plan**: 12 points

Points cannot be combined between paths. Select one of the paths below.

### 6.3.1 Path A: Life Cycle Cost Analysis

#### 6.3.1.1
A cost of ownership financial analysis is performed on the project’s collective bundle of green features (i.e., energy/water conservation measures, energy/water efficiency features, maintenance best practices, waste reduction) that are expected to impact:

- Project first costs;
- Operation costs (i.e., utility costs/savings, maintenance and repair costs, costs of replacement); or
- Other financial features of ownership.

12 points
The analysis is a life cycle cost analysis (LCCA) that compares the lifetime benefits of ownership to the subsequent costs. The analysis accounts for and clearly states all calculation assumptions related to:

- The time value of money;
- Fuel escalation rates;
- Other relevant operational factors that affect the cost of ownership.

The LCCA study period is not less than the expected life of the building or system.

Use projected annual energy costs for the proposed design for this LCCA.

<table>
<thead>
<tr>
<th>OR</th>
<th>6.3.2 Path B: Building Service Life Plan</th>
<th>Maximum =12 points</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.3.2.1 A Building Service Life Plan is implemented that includes the expected service life estimates, including inspection and replacement during the life of the building. The Building Service Life Plan covers the following systems:</td>
<td></td>
<td>Two points are earned for each of the listed elements included in the Building Service Life Plan up to a maximum of 12 points.</td>
</tr>
<tr>
<td>• 6.3.2.1.1: Structural systems;</td>
<td>(Continued from 6.3.2.1)</td>
<td></td>
</tr>
<tr>
<td>• 6.3.2.1.2: Building envelope including facades, doors, and windows;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• 6.3.2.1.3: Building roof system;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• 6.3.2.1.4: Mechanical, electrical, plumbing, fire protection, and energy generation systems;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• 6.3.2.1.5: Site hardscape; AND/OR</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• 6.3.2.1.6: Furnishing and interior fit-out.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Provide documentation of the project design service life, the listed systems service lives, the basis for the determination, and the following details for each assembly or component used in the building:

- Building assembly and material description;
- Design service life in years;
- Predicted service life in years;
- Adaptability and repurposing at end of service life; and
- Maintenance frequency and maintenance access.
### 6.3.3 Recommended Documentation
- Building service life plan;
- Capital asset plan and business case summary.

### 6.4 Moisture Control Analysis (6 points)

#### 6.4.1 Moisture Control Design Analysis

| 6.4.1.1 A moisture control design analysis is performed on walls and ceilings adjacent to spaces of added moisture AND/OR on above-grade portions of the building envelope in accordance with ASHRAE 160-2009 or a steady-state water vapor transmission analysis for the purpose of predicting, mitigating, or reducing moisture damage to the building envelope, materials, components, systems, and furnishings. | Maximum = 6 points

- Three points are earned when a moisture control design analysis is performed on walls and ceilings adjacent to spaces of added moisture.
- Not applicable where there are no spaces of added moisture.
- Three points are earned when a moisture control design analysis is performed on above-grade portions of the building envelope.

Informational Reference(s):
- ASHRAE 160-2009

### 6.5 Commissioning or Systems Manual & Training (29 points)

Two paths are available for assessing Commissioning or Systems Manual & Training.

- **Path A: Building Commissioning and Training:** 29 points
- **OR**
- **Path B: Systems Manual and Training:** 20 points

Points cannot be combined between paths. Select one of the paths below.

#### 6.5.1 Path A: Building Commissioning and Training

| 6.5.1.1 Commissioning and building operator training is conducted in accordance with ANSI/ASHRAE/IES Standard 202–2013, Commissioning Process for Buildings and Systems, and ASHRAE Guideline 0-2013, The Commissioning Process, for the following building systems: | Maximum = 29 points or N/A

- Six points are earned if commissioning and training is conducted for HVAC&R systems and controls.
6.5.1.1.1: HVAC&R systems and controls;
6.5.1.1.2: Building envelope;
6.5.1.1.3: Lighting systems and controls;
6.5.1.1.4: Plumbing;
6.5.1.1.5: Irrigation systems;
6.5.1.1.6: Electrical system including all renewable electrical generation;
6.5.1.1.7: Elevating and conveying systems;
6.5.1.1.8: Communication AND/OR Sound Masking systems; AND/OR
6.5.1.1.9: Other significant functional AND/OR energy systems (describe) that account for 10% or more of the total building energy use (describe).

- Six points are earned if commissioning and training is conducted for the building envelope.
- Six points are earned if commissioning and training is conducted for Lighting systems and controls.
- Two points are earned if commissioning and training is conducted for plumbing systems.
- Two points are earned if commissioning and training is conducted for irrigation systems.
  o Not applicable if there are no irrigation systems.
- Two points are earned if commissioning and training is conducted for Electrical systems.
- One point is earned if commissioning and training is conducted for Elevating/conveying systems.
  o Not applicable if there are no elevating/conveying systems.
- Two points are earned if commissioning and training is conducted for Communications AND/OR sound masking systems.
  o Not applicable if there are no communications AND/OR sound masking systems.
- Two points are earned if commissioning and training is conducted for other significant functional AND/OR energy systems.
  o Not applicable if there are no other significant systems.

7. SITE (150 points)

7.1 Development Area (38 points)

| Path B: Systems Manual, training syllabus and evidence of training completion. |

### 7.1.1 Urban Infill and Urban Sprawl

| 7.1.1.1 The building is being constructed on a previously developed site that has been served by existing utility and transportation infrastructure for at least a full year prior to construction. | 14 points |

### 7.1.2 Greenfields, Brownfields, and Floodplains

| 7.1.2.1 The building is being constructed on a brownfield or remediated Superfund site. | 14 points |

| 7.1.2.2 The project is not located on or adjacent to sensitive natural sites (e.g. land that is forest or woodland area, savannah, prairie, wetland, undeveloped riparian zones, or wildlife corridor) or on land that was a sensitive natural site for at least three years prior to time of purchase or from the start of project. |
| The project is not located on a site that was used for farmland, public recreation, or a public park for at least three years prior to the time of purchase or from the start of the project. |
| AND The project is not within or adjacent to a wildland-urban interface area where established by the legislative body with jurisdiction. |
| 6 points or N/A |

- Not applicable where the legislative body with jurisdiction has not declared a wildland-urban interface area.

Informational Reference(s):
- ICC, 2015 International Wildland-Urban Interface Code

| 7.1.2.3 Floodplains: |
| 7.1.2.3.1: No construction or site disturbance takes place in the 100-year floodplain. |
| Maximum = 9 points |

- Nine points are earned for 7.1.2.3.1. |
  - Not applicable where no areas in the local jurisdiction

© Green Building Initiative, Inc. (www.thegbi.org). For personal use only. Additional reproduction, distribution or transmission in either print or digital form is not permitted without Green Building Initiative’s prior written permission.
- **7.1.2.3.2**: Elevate Buildings and additions in the floodplain to a minimum of 3 ft. (.9 m) above the 100-year floodplain or are built to allow water to flow through or under the lowest floor.

AND

The facility also earns points for 7.2.1.1 or 7.2.1.7 or is within 0.25 mi (0.4 km) walking distance of developed residential land of at least 8 dwelling units per acre.

AND

Buildings and structures assigned a risk category of III or IV in Table 1604.5 of the 2012 International Building Code will not be located within a 500-year floodplain. (Not required if the entire jurisdiction is located within the 100-year floodplain. If the entire jurisdiction is located within the 500-year floodplain, then the facility is built outside the 100-year floodplain. Not applicable where no areas in the local jurisdiction fall within the 500-year floodplain.)

Informational Reference(s):

### 7.1.3 Recommended Documentation

- Site civil plans and existing site civil plans;
- Documentation by EPA, municipal, or other governmental authority of Superfund and Brownfield site;
- *Construction documents*;
- Zoning maps;
- Government maps of wildland-urban interface areas;
- Pre-construction site documentation;
- Landscaping plans;
- Floodplain map;
- Community resilience, climate action, or similar mitigation plan.

### 7.2 Transportation (34 points)

#### 7.2.1 Transportation

| **7.2.1.1** A building entrance is within 0.25 mi (0.4 km) walking distance of a local transit stop or 0.5 mi (0.8 km) walking distance of a rapid transit stop. | 10 points |

© Green Building Initiative, Inc. (www.thegbi.org). For personal use only. Additional reproduction, distribution or transmission in either print or digital form is not permitted without Green Building Initiative’s prior written permission.
Note: Local transit includes public transit that uses the same right-of-way as automobiles AND for which the distance between stops averages less than 0.33 mi (0.5 km). Rapid transit refers to all other types of public transit.

AND

The stop is served by a transit route that offers service:

- with single direction intervals (headways) no longer than 15 minutes during peak hours and 30-minute single direction intervals (headways) during off-peak hours for a minimum of 14 hours each weekday;

AND

- with single direction intervals (headways) no longer than 1 hour and operating at a minimum of 14 hours at least one day each weekend.

Information Reference(s):
- ASTM E2844-15, Standard Specification for Demonstrating that a Building’s Location Provides Access to Public Transit

| 7.2.1.2 | Designated preferred parking for car/van pooling, and shelter from weather exists for persons waiting for transportation serving carpools or transit listed in 7.2.1.1. | 1 point |
| 7.2.1.3 | Alternative refueling facilities or electric charging stations are located on site or within 0.25 mi (0.4 km) of the site. | 2 points or N/A |
|          | • Not applicable where this strategy is not possible or where the project will have no parking associated with the building. |          |
| 7.2.1.4 | A building entrance is located within 0.25 mi (0.4 km) of a public bicycle path, shared use [multi-user] path, or road with an existing dedicated bicycle lane. | 2 points |
|          | AND |          |
|          | The path, lane, or associated bicycle network connects within 5 mi (8.05 km) to a transit stop as |          |
described in 7.2.1.1 or to the developed residential land of at least 8 dwelling units per acre.

AND

There is reasonable, unobstructed access between the A bicycle lane or shared use [multi-user] path and the bicycle parking facilities or the building entrance.

7.2.1.5 A bicycle parking rack is located within 50 ft. (15.24 m) of an entrance, and is either readily visible from a main entrance, or signage indicating the location is posted at main entrances.

OR

### 7.3.1.2 Path B: Erosion and Sedimentation Control Specifications

**7.3.1.2.1** The specifications require the implementation of the following best practices as appropriate to the site for erosion and sediment control during construction:

- **Construction Site Planning and Management Measures:** construction sequencing, construction site operator BMP inspection and maintenance, preserving natural vegetation;
- **Erosion Control:** articulated concrete block, chemical stabilization, compost blankets, dust control, flocculants, geotextiles, gradient terraces, *mulching*, riprap, seeding, sodding, soil retention, soil roughening, temporary slope drain, temporary stream crossings, wind fences and sand fences;
- **Runoff Control:** check dams, grass-lined channels, permanent slope diversions, temporary diversion dikes;
- **Sediment Control:** brush barriers, compost filter berms, compost filter socks, construction entrances, fiber rolls, filter berms, sediment basins and rock dams, sediment filters and sediment chambers, sediment traps, silt fences, storm drain inlet protection, straw or hay bales, vegetated buffers; and
- **Good Housekeeping/Materials Management:** concrete washout, general construction site waste management, spill prevention, and control plan, vehicle maintenance and washing areas at construction sites.

**Informational Reference(s):**
- U.S. EPA’s Construction Site Stormwater Runoff Control - Menu of Best Management Practices

Maximum = 5 points or N/A

- Not applicable where the lot is larger than one acre.
- Not applicable where projects are interior-only.

(Answer regardless of the Path chosen above):

### 7.3.2 Site Disturbance

**7.3.2.1** Construction activities do not go beyond 40 ft. (12.2 m) of the building footprint(s) and remain within 5 ft. (1.5 m) of parking lots, roadways, sidewalks and utility right-of-ways except where the intent of the construction activities was one or more of the following:

Exceptions apply where the construction activities are intended to specifically improve the natural integrity of the site, e.g., removing invasive plant species, replacing existing hardscapes with vegetation, restoring prairie or *wetlands*,

5 points or N/A

- Not applicable where projects are interior-only.

(Continued from 7.3.2.1)
or increasing on-site water retention by building rain gardens, swales, retention ponds, or berms.

<tr>
<th>7.3.4.2 Hardscape: The building design addresses hardscape using one or more of the following strategies:</th>
<th>Maximum = 5 points or N/A</th>
</tr>
</thead>
</table>
| **7.3.4.2.1 Solar Reflectance**: Hardscape surfaces with a solar reflectance (SR) value of at least 0.28 are used. New concrete and concrete masonry without additional colored pigment are deemed to comply without additional testing.  
  o Not applicable for interior-only projects. | **Five points are earned where ≥50% of hardscape surfaces comply with 7.3.4.2.** |
| **7.3.4.2.2 Shading**: Where the hardscape surfaces are not shaded by the primary building structures (either the building project or other existing buildings), hardscape surfaces outside the building footprint are intended to be shaded by trees or other vegetation within 10 years. Take the shading measurement at noon Standard Time on the Summer Solstice and document in the shading plan | **Three points are earned where ≥25% and <50% of hardscape surfaces comply with 7.3.4.2.** |

- Six points are earned where >70% of the roof complies
  - Three points are earned where 70% of the roof has a high initial SRI, and three points are earned where 70% of the roof has a high three-year-aged SRI.
- Four points are earned where >50% and ≤70% percent of the roof complies.
  - Two points are earned where 56%-70% of the roof has a high initial SRI and two points are earned where >50% and ≤70% of the roof has a high three-year-aged SRI.
- Two Points are earned if 40%-55% percent of the roof complies.
  - One point is earned where 40%-55% of the roof has a high initial SRI, and one point is earned where 40%-55% of the roof has a high three-year-aged SRI.
- No points are earned where less than 40% of the roof complies AND/OR has a high initial or three-year-aged SRI.
- Not applicable for interior-only projects.
• **7.3.4.2.3 Permeable Surfaces:** At least 50% of installed hardscape area (walkways, patios, driveways, etc.) uses permeable materials. Permeable materials include one or more of the following:
  - Clay or concrete paver with pervious joints/openings;
  - Bricks;
  - Gravel;
  - Vegetative paving systems;
  - Mulch;
  - Pervious concrete;
  - Porous asphalt; AND/OR
  - Open-grid pavement system (at least 50% unbound).

**7.3.4.3 Walls:** At least 75% of opaque wall surfaces (by area) on the east, west, and south have an SRI of 29 or greater, are covered by or are designed to be covered by, non-invasive vegetation AND/OR a vegetative wall during the summer months. New concrete or concrete masonry without additional colored pigment is deemed to comply without additional testing.

**7.4 Stormwater Management (21 points)**

**7.4.1 Stormwater Management**
### 7.4.1.1
A civil engineer makes a *stormwater* management report that shows the following:

- **7.4.1.1.1**: The project meets a minimum of 80% Total Suspended Solids (TSS) removal or complies with municipal AND/OR local watershed water quality control targets, whichever is more stringent; and
- **7.4.1.1.2**: 50% annual average total phosphorus (TP) removal assuming typical pollutant concentrations in urban runoff.
- **7.4.1.1.3**: Additional target pollutant removals are as follows:
  - Nitrate + nitrite reduction of 40% OR pH below 6.5 OR Alkalinity below 10 mg CaCO3/L.

Note: Infiltration is not to be used as a treatment method if the site is located within 0.25 mi (0.4 km) of a lake or wetland.

**Maximum** = 17 points or N/A

- Three points are earned for compliance with 7.4.1.1.1.
- One point is earned for compliance with 7.4.1.1.2.
- One point is earned for compliance with each item in 7.4.1.1.3 for a maximum of three points.

**OR**

- Seventeen points are earned for compliance with 7.4.1.1.4.
- Not applicable for interior-only projects.

### Informational Reference(s):
- EPA National Stormwater Calculator:
- *Technical Guidance on Implementing the Stormwater Runoff Requirements for Federal Projects 2009*

### 7.4.1.2
Hardscapes and structures, excluding pervious walkways 48 in. (121.9 cm) or less in width, are located 100 ft. (30.5 m) or more from a natural body of water or natural waterway on or adjacent to the site. Document such distance on the site plan. Water bodies and waterways include:

- Oceans;
- Lakes;
- Rivers;
- Streams;

4 points or N/A

- Not applicable where the body of water is a retention pond or constructed *wetland*, or is a constructed feature that receives all *stormwater* runoff.
7.4.2 Recommended Documentation

- Area rainfall charts;
- Civil AND/OR landscaping drawings indicating drainage;
- Percolation test results;
- Roof plans;
- Site plans, including all areas of hardscape;
- Soil boring reports;
- Storm water discharge plan.

7.5 Landscaping (21 points)

7.5.1 Landscaping

7.5.1.1 A landscape design is planned and installed as follows:

- **7.5.1.1.1:** The plan is developed by a landscape architect, certified professional landscape designer, certified horticulturist, or other qualified professional; AND
  - The plan shows the natural light conditions of the site; AND
  - The plan shows structural limitations (e.g., shading, utilities, overhangs, lights) that would impact the location and growth of plants.
- **7.5.1.1.2:** The plan identifies existing soil types, and the installed landscape incorporates appropriate soil preparation and drainage to support root development for vegetation planned for the site.

Where an irrigation system is installed, refer to Water Efficiency, Section 9.8, Irrigation.

Informational Reference(s):
- Local Cooperative Extension Research, Education, and Extension Service
- State and local university or college landscape reference guide

7.5.1.2 The vegetation palette includes the following:

Maximum = 3 points or N/A
- Three points are earned where the landscape plan is developed and shows natural light conditions and structural limitations.
- Three points are earned where the plan identifies existing soil types, and the installed landscape incorporates soil preparation and drainage as stated.
- Not applicable where there is no room for landscaping.
- The vegetated area uses non-invasive, **drought tolerant plants**.

Required documentation:
Website or literature that indicates that the given plant(s) are drought-tolerant or require little to no supplemental water for the specific region.

Only applicable when the determination of plant invasiveness is guided by a list or lists that:
- cover the appropriate geographical region; AND
- are not limited to noxious weeds.

Informational Reference(s):
- College, state or local university, or agency landscape reference guide
- 2016 *Invasive Species Compendium*: [www.cabi.org/isc](http://www.cabi.org/isc) (last accessed 7/14/17)

<table>
<thead>
<tr>
<th>7.5.1.3 The vegetated area is covered with plants (new, retained, or salvaged plantings) that are native.</th>
<th>Maximum = 4 points or N/A</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Four points are earned if &gt; 75% of plants are native.</td>
<td></td>
</tr>
<tr>
<td>• Three points are earned if between &gt; 50 and ≤75% of plants are native.</td>
<td></td>
</tr>
<tr>
<td>• Two points are earned if between &gt;32 and ≤50% of the plants are native.</td>
<td></td>
</tr>
<tr>
<td>• One point is earned if between ≥20 and ≤32% of plants are native.</td>
<td></td>
</tr>
<tr>
<td>• No points are earned if &lt; 20% of the plants are native.</td>
<td></td>
</tr>
<tr>
<td>• Not applicable where there is no room for landscaping.</td>
<td></td>
</tr>
</tbody>
</table>

| 7.5.1.4 The landscape design shows that plants with similar water requirements are grouped together on the site. | 2 points or N/A |
7.5.1.5 The building project supports on-site agriculture accessible to building users or employees in any of the following ways:

- 7.5.1.5.1: Rooftop garden(s), edible landscape(s), food forest, or community garden is installed on-site;
- 7.5.1.5.2: 25% of vegetated area is dedicated to pollinator-friendly plantings or an apiary;
- 7.5.1.5.3: Chicken coop, aquaponics farm, AND/OR greenhouse is installed on-site;

Informational Reference(s):

Maximum = 6 points or N/A

7.6 Exterior Light Pollution (7 points)
Two paths are provided for assessing exterior light pollution:

- **Path A: Lighting Design Performance**: 7 points
  OR
- **Path B: Prescriptive Lighting Requirements**: 7 points

Points cannot be combined between paths. Select one of the paths below.

7.6.1 Path A: Lighting Design Performance

7.6.1.1 An engineer or lighting professional creates a lighting design that meets all the performance requirements of the *IDA - IES Model Lighting Ordinance*.

Informational Reference(s):
- *IDA – IES Model Lighting Ordinance (MLO, 2011)*

7 points or N/A

- Not applicable where there is no site lighting.
### 7.6.2 Path B: Prescriptive Lighting Requirements

<table>
<thead>
<tr>
<th>Section</th>
<th>Requirement</th>

</tbody>
</table>

### 7.6.3 Recommended Documentation

- Cut-sheets and calculations;
- Electrical engineer’s site lighting plan with illuminance computations spaced no more than 10 ft. (3.05 m) apart;
- Exterior lighting plans;
- Narrative describing which lighting zone the property falls under;
- Path taken for compliance to the MLO;
- Zoning ordinance requirements.

### 7.7 Wildland-Urban Interface Site Design (3 points)

<table>
<thead>
<tr>
<th>Section</th>
<th>Requirement</th>
<th>Points</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>7.7.1.1</td>
<td>There is a determination by a fire protection engineer or certified fire marshal that the site wildland-urban interface hazard is moderate, high or extreme; AND The project achieves points for 7.2.1.1 or 7.2.1.7 or is within 0.25 mi (0.4 km) walking distance of developed residential land of at least 8 dwelling units per acre;</td>
<td>3 points or N/A</td>
<td>Not applicable where the authority having jurisdiction or legislative body has formally declared a wildland-urban interface area.</td>
</tr>
</tbody>
</table>
AND

The site is designed to comply with the most recent International Wildland-Urban Interface Code;

AND

Excluding athletic fields and agriculture, greater than 50% of the vegetation on site achieves points for Section 7.5.1.2 for drought tolerant plants, and greater than 50% of the vegetation on site achieves points for Section 7.5.1.3 for native plants.

AND

A fire protection engineer or certified fire marshal has inspected the completed site within 90 days prior to project certification or re-certification and found it compliant with the International Wildland-Urban Interface Code.

Informational Reference(s):
- International Wildland-Urban Interface Code 2015
8. ENERGY (260 points)
Three paths are provided for assessing energy performance.

- **Path A: Performance - ANSI/ASHRAE/IES Standard 90.1-2010, Appendix G**: 180 points
  - OR
  - **Path B: Performance - Building Carbon Dioxide Equivalent (CO2e) Emissions**: 180 points
    - OR
    - **Path C: Prescriptive**: 111 points

Points cannot be combined between paths. Select one of the paths below.

### 8.1 Path A: ANSI/ASHRAE/IES Standard 90.1-2010, Appendix G (180 points)

#### 8.1.1 Performance Path

<table>
<thead>
<tr>
<th>The building complies with minimum performance based requirements of ANSI/ASHRAE/IES Standard 90.1-2010 or the 2012 IECC;</th>
<th>Maximum = 180 points</th>
</tr>
</thead>
<tbody>
<tr>
<td>AND</td>
<td>• One hundred eighty points are earned where the project achieves a level of 45% improvement over the baseline.</td>
</tr>
<tr>
<td>The building demonstrates an improvement over an ANSI/ASHRAE/IES Standard 90.1-2010 baseline using Appendix G through the use of a whole-building energy modeling simulation program showing energy cost savings.</td>
<td>o Four points are earned for every 1% improvement up to 45% improvement over the baseline for a maximum of 180 points.</td>
</tr>
<tr>
<td>• Energy cost calculations may include price components based on time of day and demand if these are available. Credit for demand-saving measures, cogeneration, and energy storage may be claimed by utilizing rate schedules that reflect the billing rates in effect for the local utility, rather than using EIA state average utility rates.</td>
<td>o No points are earned where the building complies with the minimum performance based requirements of either ANSI/ASHRAE/IES Standard 90.1-2010 or the 2012 IECC.</td>
</tr>
</tbody>

#### 8.1.2 Recommended Documentation

- The energy modeling report includes a narrative describing energy efficiency measures included in the project along with input and output reports sufficient to verify the modeling approach used to demonstrate the higher level of performance including key assumptions and methods used to determine the inputs. The report may include tabular summaries of:
  - Building envelope performance (permit document tabulation for the enclosure, such as COMcheck forms);
  - HVAC system capacities and efficiencies;
  - Lighting power densities and control methods;
  - Schedules for occupancy, equipment, and HVAC;
  - Assumptions for plug and process loads; AND/OR
  - ENERGY STAR® Target Finder results or other benchmarking comparisons for the baseline and proposed models.
- Description of any variances between models for plug and process loads.
- Documentation of basis for utility rates used in whole-building energy model.
- People moving equipment will be modeled identically in the proposed and baseline buildings, and credit taken appropriately in Section 8.4 Non-Modeled Energy Efficiency Statement of energy cost savings rounded to one-tenth of a percent.

**OR**

### 8.2 Path B: Building Carbon Dioxide Equivalent (CO2e) Emissions - (180 points)

#### 8.2.1 Percent Reduction in Carbon Dioxide Equivalent (CO2e) Emissions

**8.2.1.1** The building achieves more than a 50% reduction in carbon dioxide equivalent (CO2e) emissions over the baseline building for its geographical location. This reduction is calculated using the following formula:

\[
\text{Percent reduction in CO2e} = 100 \times (1 - \frac{\text{PER}}{\text{BER}})
\]

- The Baseline Equivalent Emission Rate (BER) is the baseline building’s carbon dioxide equivalent (CO2e) emission rate.
- PER is the proposed building’s carbon dioxide equivalent (CO2e) emission rate.
- PER is less than BER.

**Assessment Guidance:**

**Baseline Equivalent Emission Rate (BER) Calculations**

\[\text{BER} = (\text{baseline Energy Use Intensity (EUI)}) \times \text{product of} \left(\frac{\text{percentage of each fuel in the annual energy fuel mix for the planned building type and location}}{\text{CO2e Emission Factor for each fuel}}\right)\]

- The baseline building’s site Energy Use Intensity (EUI) is determined using ENERGY STAR Target Finder.
- The baseline building’s site EUI is 35% better than the Energy Performance Rating (Target Finder) score of 50.
- The annual energy fuel mix for the baseline building is determined from DOE-EIA and reported at the top of Target Finder’s Results page.
- The CO2e emission factor for each fuel in the baseline building’s annual energy fuel mix can be found in Table 8.1- A.

**Proposed Equivalent Emission Rate (PER) Calculations**

\[\text{PER} = (\text{proposed EUI}) \times \text{product of} \left(\frac{\text{percentage of each fuel in the annual energy fuel mix for the proposed building}}{\text{CO2e Emission Factor for each fuel}}\right)\]

- Maximum = 180 points
- Four points are earned for each percent reduction in CO2e emissions above the baseline, to a maximum total of 180 points.
• The proposed building’s Energy Use Intensity (EUI) is calculated using a computer-based simulation program that conforms to the requirements outlined in Section 506 of the 2009 International Energy Conservation Code or ANSI/ASHRAE/IES Standard 90.1-2010, Appendix G, Section G2.2.

• Determine the Proposed Building’s Equivalent Emission Rate (PER) by performing an EUI calculation for the proposed building using the energy performance requirements specified by Table G3.1 Modeling Requirements for Calculating Proposed and Baseline Building Performance in ANSI/ASHRAE/IES Standard 90.1-2010. Only the Proposed Building Performance column is used for modeling the PER.

• Use the annual energy fuel mix planned for the proposed building for this calculation.

• The CO2e emission factor for each fuel in the proposed building’s annual energy fuel mix can be found in Table 8.2.1- A of this document.

8.2.2 Recommended Documentation
- Energy simulation program’s input and results;
- ENERGY STAR Target Finder results;
- Lighting design permit documents, such as COMcheck reports;
- PER, BER, and CO2e emission reduction calculations.

OR

8.3 Path C: Prescriptive (111 points)
Compliance with the prescriptive requirements of this section earns points based on the minimum prescriptive requirements of referenced codes and standards and building characteristics or best practices that are related to energy efficiency.

8.3.1 Building Envelope and Form (20 points)

8.3.1.1 Thermal Resistance and Transmittance

8.3.1.1.1 All of the opaque and fenestration elements of the building envelope have a window-to-wall ratio less than or equal to 40% and comply with at least one of the following:

- The thermal transmittance (U-factor), thermal conductance (C-factor), F-factor, and SHGC are less than those in the 2015 IECC, Section C402, or ANSI/ASHRAE/IES Standard 90.1-2013, Section 5, by 10%, except for these items where the factors must meet the 2015 IECC or ANSI/ASHRAE/IES Standard 90.1-2013:
  - Opaque elements in Climate Zones 1 through 3

Maximum = 10 points

- Ten points are earned where there is a 10% decrease in U-factor, C-factor, F-factor and SHGC from prescriptive requirements of the 2015 IECC, section C402, or ANSI/ASHRAE/IES Standard 90.1-2013, section 5.
- Eight points are earned where there is a 5% decrease in U-factor, C-factor, F-factor, and SHGC from prescriptive requirements of the 2015 IECC, section C402, or ANSI/ASHRAE/IES Standard 90.1-2013, section 5.
- SHGC for north and south-oriented fenestration
  - In cases where the R-value or SHGC are NR (no requirement).
- Demonstrate that the U-factor, C-factor, F-factor, and SHGC are less than those in the 2015 IECC, Section C402, or ANSI/ASHRAE/IES Standard 90.1-2013, Section 5, by 5%, except for these items where the factors must meet the 2015 IECC or ANSI/ASHRAE/IES Standard 90.1-2013:
  - Opaque elements in Climate Zones 1-3
  - SHGC for north and south-oriented fenestration
  - In cases where the R-value or SHGC are NR (no requirement).
- The thermal resistance (R-value/RSI-value) or the thermal transmittance (U-factor), thermal conductance (C-factor), and F-factor; and for fenestration, the U-factor and SHGC meet or exceed the prescriptive requirements of the 2015 IECC, section C402, or ANSI/ASHRAE/IES Standard 90.1-2013, section 5.5.

Note: A project must choose either the IECC or ANSI/ASHRAE/IES Standard 90.1 for all factors.

Informational Reference(s):
- ANSI/ASHRAE/IES Standard 90.1-2013, Section 5.5
- 2015 IECC, Section C402
- 2012 IECC, Section C402

### 8.3.1.2 Orientation

#### 8.3.1.2.1 The building is oriented such that the ratio of the west fenestration to the total fenestration and the ratio of the east fenestration to the total fenestration is between ¼ and 1/6.

<table>
<thead>
<tr>
<th>Ratio</th>
<th>Points</th>
</tr>

<td>10</td>
</tr>
<tr>
<td>&gt; 1/6 but ≤ 1/5</td>
<td>6</td>
</tr>
<tr>
<td>≤ ¼</td>
<td>2</td>
</tr>
</tbody>
</table>

Maximum = 10 points

- Ten points are earned where the ratio is ≤1/6.
- Six points are earned where the ratio ≤ 1/5 and >1/6.
- Two points are earned where the ratio is ≤ ¼ and >1/5.

### 8.3.1.3 Recommended Documentation

- Construction documents;
- Fenestration ratios for north/south and east/west orientations;
- List of SHGC values including calculations for overall performance;
- List of thermal resistance or thermal transmittance factors, thermal conductance factors, and F-factors;
- Manufacturer's specifications, cut sheets, and performance documentation;
- Site plans.

8.3.2 Lighting (41 points)

<table>
<thead>

least 50% from full lighting power using any of the following technologies:

- **Dimming**: Continuous dimming of the lamps or luminaires from 100% to at least 10% of full light output;
- **Multi-level Lighting**: Lighting with at least 5 control steps including ON and OFF; or
- **Bi-level lighting**: Dual switching of alternate rows or luminaires; Switching of individual lamps independently of adjacent lamps within a luminaire.

Three points are earned where more than 90% of light fixtures have continuously dimmable light reduction controls.

Two points are earned where more than 90% of the light fixtures have light reduction controls based multi-level lighting.

One point is earned where there is bi-level control.

Not applicable where spaces use less than 0.5 W/ft² (5.4 W/m²).

### 8.3.2.3.2 Occupants in private offices less than 250 ft² (23.23 m²) and in open office workstation areas can adjust their direct overhead lighting levels via continuous dimming or multi-level lighting.

Providing bi-level overhead lighting in conjunction with separate task lighting is permitted for compliance.

Maximum = 3 points

- Three points are earned where more than 90% of light fixtures have continuously dimmable personal lighting control.
- Two points are earned where more than 90% of the light fixtures have multi-level lighting.
- One point is earned where there is bi-level control of overhead lighting and separate task lights.

### 8.3.2.4 Daylighting

#### 8.3.2.4.1 For buildings two stories or less above grade, a minimum of 50% of the total combined floor area is in a daylight area.

For buildings three or more stories above grade, a minimum of 25% of the total combined floor area is in a daylight area. Control Lighting in the primary and secondary daylight areas with daylight responsive dimming plus OFF.

Informational Reference(s):

- ANSI/ASHRAE/IES Standard 90.1-2013, Section 3, Definition of Daylight Area

Maximum = 3 points or N/A

- Three points are earned for compliance, excluding spaces that are not regularly occupied, such as, but not limited to, mechanical spaces and storage areas.
- Not applicable where spaces would be functionally compromised by daylighting.

#### 8.3.2.4.2 A minimum of 2% of the roof area consists of skylights that comply with the requirements of Sections 5 and 9 of ASHRAE Standard 90.1-2013.

Base this percentage upon the horizontal projected area of the daylight and roof, without overhangs. Earning this credit is contingent on compliance with the daylight control credit 8.3.2.5.

Maximum = 3 points or N/A

- Three points are earned where ≥5% of the roof consists of skylights.
- Two points are earned where >3% and <5% of the roof consists of skylights.
- One point is earned where ≥2% and ≤3% of the roof consists of skylights.
### 8.3.2.5 Control for Daylit Zones

**8.3.2.5.1 Control lighting in primary and secondary daylight zones** [use 90.1-2013 definitions for daylight zones] with automatic daylight responsive lighting controls that lower the power consumption of the lighting system when daylight is available.

Maximum = 3 points
- Three points are earned where there is automatic continuous daylight dimming to OFF control of all the general lighting in both primary and secondary zones.
- Two points are earned where there is automatic daylighting switching to OFF control of the general lighting in primary zone and secondary daylight zones.
- Two points are earned where there is no daylighting if it would be detrimental to the intended use of more than 90% of the building area.

### 8.3.2.6 Exterior Luminaires and Controls

**8.3.2.6.1 Exterior LPDs comply with or improve upon ANSI/ASHRAE/IES Standard 90.1-2013 Section 9.4.3 for exterior lighting power density.**

Additional control requirements to earn LPD credit include:
- Deactivating lighting when sufficient daylight is available; and
- Shutting off façade and landscape lighting between midnight and business opening, or other similar hours approved by the AHJ.

Maximum = 2 points or N/A
- Two points are earned where LPDs are 20% below ANSI/ASHRAE/IES Standard 90.1-2013.
- One point is earned where ANSI/ASHRAE/IES Standard 90.1-2013 is met.
- Not applicable where there are no exterior luminaries.

**8.3.2.6.2 Garage and Parking Lot Lighting Control:**

Pole lighting in parking lots and garage luminaires are controlled such that at least 50% of the lighting power is automatically reduced during periods of no activity detected in the lighting zone.

Maximum = 2 points or N/A
- Two points are earned where all garage and parking lot general lights are controlled to more than one lighting level.
- One point is earned where 50% of the garage and parking lot general lighting is controlled to more than one lighting level.
- Not applicable where there are no garage or parking lot general lighting fixtures.

### 8.3.2.7 Recommended Documentation

- Effective aperture calculations for all office and classroom areas;
- Electrical exterior/site lighting plans;
- Lighting plans with controls information or separate lighting controls plan;
- List of lamps specified on the project;
- LPD calculations and results (COMcheck is one acceptable calculation method);
8.3.3 HVAC Systems and Controls (37 points)

8.3.3.1 Building Automation System (BAS)

8.3.3.1.1 A central Building Automation System (BAS) encompasses all systems that affect building energy performance, lighting, and thermal comfort including all of the functionality listed below:

- A series of direct digital controllers (DDC) interconnected by a local area network and accessible by a web browser;
- Open communication protocols (e.g., BACnet) to allow interoperability between building systems and control vendors;
- Energy management and monitoring software that provides:
  - Start/stop control for HVAC equipment;
  - Control of economizer cycles and heat recovery equipment; and
  - Control of minimum outdoor ventilation air;
- Log of trending, scheduling, set-point adjustments, event information, alarm information, confirmation of operators, and execution of global commands; and
- Monitoring of fire safety systems, security systems, and elevator control systems to prompt emergency operating modes of HVAC and lighting systems.

1 point or N/A

- Not applicable where buildings are under 20,000 ft.² (1,858.06 m²).

8.3.3.1.2 The BAS has the capability to accept and collate data generated by any and all metering equipment as required by Section 8.5 Metering, Monitoring, and Measurement of the Energy assessment area of this Standard.

1 point or N/A

- Not applicable where buildings are under 20,000 ft.² (1,858.06 m²).

8.3.3.2 Cooling Equipment

8.3.3.2.1 The cooling equipment base efficiency meets ANSI/ASHRAE/IES Standard 90.1-2013 efficiency requirements with respect to COP, EER, IEER, and SEER or the building does not use mechanical cooling.

Maximum = 5 points or N/A

- Five points are earned where performance is 10% higher than the requirements of ANSI/ASHRAE/IES Standard 90.1-2013.
- Three points are earned where performance is 5% higher than the requirements of ANSI/ASHRAE/IES Standard 90.1-2013.
- One point is earned where performance is equivalent to the

Table 6.8.1-10 Variable refrigerant flow air-to-air and applied heat pumps

Table 6.8.1-11 Computer room A/C and condensing units

A weighted average improvement over efficiency is provided by the design engineer based on the capacity for projects with multiple applicable types of equipment. Air-conditioning units constituting less than 1% of the total capacity may be omitted from the calculation.

Cooling systems that utilize hydronic heat rejection also include measures to minimize fan power in order to earn efficiency credits under this section. Any of the following measures are used in cooling towers to reduce fan energy consumption:

- Two-speed fans;
- Variable speed fans; AND/OR
- Measures that allow operation at reduced fan power during part-load operation.

8.3.3.3 Heating Equipment

8.3.3.3.1 The heating equipment base efficiency meets ANSI/ASHRAE/IES Standard 90.1-2013 efficiency requirements with respect to AFUE, $E_\alpha$, $E_\text{r}$, HSPF, or COP as appropriate to the specific equipment, or the building does not have a heating system.

</tbody>
</table>

Maximum = 5 points or N/A

- Five points are earned where performance is 10% higher than the requirements of ANSI/ASHRAE/IES Standard 90.1-2013.
- Three points are earned where performance is 5% higher than the requirements of ANSI/ASHRAE/IES Standard 90.1-2013.
- One point is earned where performance is equivalent to the requirements of ANSI/ASHRAE/IES Standard 90.1-2013.
- No points are earned where there is electric resistance heat.
- Not Applicable where the building does not use heating systems.

- Not Applicable where the building does not use mechanical cooling.
The design engineer provides a weighted average improvement over efficiency based on the capacity for projects with multiple applicable types of equipment. Heating units constituting less than 1% of the total capacity may be omitted from the calculation.

Steam systems return condensate to the boiler feedwater system or recover heat from the condensate before sending it to the drain in order to claim equipment efficiency points.

### 8.3.3.4 Domestic Hot Water Heaters

**8.3.3.4.1** All domestic hot water heaters meet the efficiency requirements of ANSI/ASHRAE/IES STANDARD 90.1-2013, Table 7.8, or domestic hot water heaters are not provided.

**Maximum = 1 point**

- One point is earned where performance is 10% better than the requirements of ANSI/ASHRAE/IES Standard 90.1-2013.
- No points are earned where there is electric resistance heat

### 8.3.3.5 Energy Recovery

**8.3.3.5.1** The HVAC design complies with Section 6.5.6 of the ANSI/ASHRAE/IES Standard 90.1-2013.

**6 points or N/A**

- Not applicable where projects meet the exemptions of Section 6.5.6.

### 8.3.3.6 Simultaneous Heating and Cooling

**8.3.3.6.1** The HVAC design minimizes or eliminates simultaneous heating and cooling through one of the following strategies:

- HVAC design complies with Section 6.5.2 of the ANSI/ASHRAE/IES Standard 90.1-2013.

OR

- HVAC design incorporates a configuration/strategy that eliminates reheat and re-cool by using thermal and ventilation compartmentalization, with heating, cooling, and ventilation provided independently for each zone, e.g., fan coil systems, distributed heat pumps, single-zone systems.

**Maximum = 6 points or N/A**

- Six points are earned where HVAC design uses ventilation compartmentalization.
- Four points are earned where HVAC design complies with Section 6.5.2.
- Not applicable for projects that meet the exemptions of Section 6.5.2.

Informational Reference(s):  
- ANSI/ASHRAE/IES Standard 90.1-2013

### 8.3.3.7 Economizers
8.3.3.7.1 The project complies with Section 6.5.1 of the ANSI/ASHRAE/IES Standard 90.1-2013.  
3 points or N/A

- Not applicable where projects meet the exemptions of Section 6.5.1.

8.3.3.8 Air-Handling Equipment and Ventilation Control

8.3.3.8.1 The project uses equal or less fan power than the requirements of ANSI/ASHRAE/IES Standard 90.1-2013 Table 6.5.3.1-1 including all exceptions and modifiers.  
Maximum = 6 points or N/A

- Three points are earned where project complies with ANSI/ASHRAE/IES 90.1-2013 Table 6.5.3.1-1.
- One additional point is earned for each 10% less than the allowance according to Table 6.5.3.1-1, up to a maximum of 6 points.
- Not applicable where there are no fan systems.

8.3.3.8.2 Occupancy AND/OR CO₂ sensors are installed to control ventilation rates in regularly occupied spaces that may experience frequent variation in the number of occupants. CO₂ sensors maintain calibration within 2% for one year after initial installation.  
3 points or N/A

- Not applicable where spaces meeting this criterion represent less than 40% of the total design ventilation volume of the building.

8.3.3.9 Recommended Documentation

- Basis of Design document;
- Construction documents;
- Description of condensate recovery system;
- Equipment specifications, control schedules, and diagrams;
- HVAC drawings;
- Manufacturer’s specifications, cut sheets, and performance documentation;
- Mechanical design drawing, details, and specifications;
- Project specifications.

8.3.4 Energy Simulation Aided Design & Integrative Process (13 points)

8.3.4.1 Energy Simulation Aided Design

8.3.4.1.1 Before finalizing the building footprint, perform an energy simulation on a simplified geometric representation of the building to determine strategies to save lighting and HVAC energy. This simulation includes massing, orientation, window-to-wall ratio, and building envelope strategies.  
8 points

8.3.4.2 Integrative Process
**8.3.4.2** Before issuing construction documents, a simulation is used to inform design decisions regarding incremental equipment efficiency of building systems for the envelope, lighting, and HVAC. 5 points

**8.3.4.3. Recommended Documentation**
- The findings, as well as the name and contact information for the individual responsible for the energy modeling, are provided.

Complete 8.4, 8.5, and 8.6 regardless of Path chosen above.

### 8.4 Non-Modeled Energy Efficiency Impacts (15 Points)

#### 8.4.1 Vertical, Horizontal, and Inclined Transport Systems – Efficiency Measures

<table>
<thead>
<tr>

</tbody>
</table>
- innovative energy efficient people-transport equipment or system (Requires statement of system description and benefits document for submittal).

Informational Reference(s):
- ENERGY STAR Qualified Product Lists, 2014

### 8.4.1.2 Recommended Documentation
- *Construction documents*;
- Descriptive explanation and technical definition document on the innovative solution used within the project;
- Drawings and specifications of vertical transport equipment;
- Manufacturer’s specifications, cut sheets, and performance documentation.

### 8.4.2 Load Shedding

#### 8.4.2.1 Install lighting systems that are capable of load shedding. Loading shedding may be initiated automatically or manually.  
Maximum = 3 points
- Three points are earned where lighting system can reduce power by \( \geq 30\% \) from peak levels.
- Two points are earned where lighting system can reduce power by \( \geq 15\% \) and \( < 30\% \) from peak levels.

#### 8.4.2.2 HVAC equipment controls that are capable of load shedding are installed. Loading shedding may be initiated automatically or manually. Load shedding program initiates setback of space temperatures, heating and cooling system hydronic temperatures, air system static pressure setpoints, or cycling of heating and cooling equipment.  
2 points

### 8.4.3 Plug Load and Process Energy Management

#### 8.4.3.1 The project documents include an inventory of appliances and equipment organized by location. The inventory includes:
- nameplate power use;
- typical power use; and
- an expected schedule of use.  
Maximum = 2 points
- Two points are earned where there is a complete inventory of expected plug load equipment appliances, and hard-wired process equipment.
- One point is earned where there is a complete inventory of hard-wired process equipment only.
- One point is earned where there is a complete inventory of plug load equipment and appliances only.
8.4.3.2 Establish a policy that requires all new equipment purchases be based on energy efficient criteria, such as ENERGY STAR or other equivalent energy efficiency standards.

<table>
<thead>
<tr>
<th>1 point or N/A</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Not applicable if no equipment is subject to ENERGY STAR label criteria.</td>
</tr>
</tbody>
</table>

8.4.3.3 The project is furnished with receptacles that automatically control the availability of power based on occupancy sensors AND/OR timed schedules in accordance with ANSI/ASHRAE/IES Standard 90.1-2010.

<table>
<thead>
<tr>
<th>Maximum =2 points</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Two points are earned where energy-saving power strips are installed on ≥75% to 100% of private offices, open offices and computer classrooms, including receptacles installed in modular partitions.</td>
</tr>
<tr>
<td>• One point is earned where energy-saving power strips are installed on ≥50% and &lt; 75% of private offices, open offices and computer classrooms, including receptacles installed in modular partitions.</td>
</tr>
</tbody>
</table>

### 8.5 Metering, Monitoring, and Measurement (25 points)

#### 8.5.1 Metering

8.5.1.1 Install Metering or ensure a mandatory design requirement exists for metering (at the building level) for the following:

- Electricity (N/A where metering does not exist for electricity);
- Heating fuels (N/A where metering does not exist for heating fuels);
- Steam (N/A where metering does not exist for Steam); and
- Other (e.g., chilled or hot water for campus/district systems) (N/A where metering does not exist for any other systems).

<table>
<thead>
<tr>
<th>Maximum = 5 points or N/A</th>
</tr>
</thead>
<tbody>
<tr>
<td>• One point is earned for each 20% increment of the building’s site energy that is metered through any combination of building-level energy meters up to a maximum of 5 points.</td>
</tr>
<tr>
<td>• Not applicable only where specified for each criterion.</td>
</tr>
</tbody>
</table>

8.5.1.2 Install sub-metering or energy monitoring equipment in the building, or require a mandatory tenant improvement that calls for sub-metering or energy monitoring equipment to be installed for the following systems:

- Lighting and lighting controls by floor or by zones with floor areas no greater than 20,000 ft² (1860 m²);
- Plug loads by floor or by zones no greater than 20,000 ft² (1860 m²);
- Major electric HVAC equipment (e.g., chillers, cooling towers, AHU fans, pumps) 5 HP or greater;
- Chilled water generation;
- On-site renewable energy power generation;
- Heating water or steam generation; AND/OR
- Specialty or process electrical equipment.

<table>
<thead>
<tr>
<th>Maximum = 5 points or N/A</th>
</tr>
</thead>
<tbody>
<tr>
<td>• One point each for sub-metering five or more of the listed systems in a MURB at the building level to a maximum of 5 points.</td>
</tr>
<tr>
<td>• Two points each are earned when heating, cooling, and electricity are sub-metered at the individual unit level in a MURB to a maximum of 5 points.</td>
</tr>
<tr>
<td>• One point is earned for each listed system where sub-metering is installed to a maximum of 5 points.</td>
</tr>
<tr>
<td>• Not applicable for buildings less than 20,000 ft² (1860 m²).</td>
</tr>
</tbody>
</table>
### 8.5.2 Monitoring and Reporting

<table>
<thead>
<tr>
<th><strong>8.5.2.1</strong> A Resource Management Plan addresses all energy consuming areas of a building or project and includes the following monitoring protocols (i.e., hourly, daily, monthly, seasonal, by floor, etc.):</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Electricity;</td>
</tr>
<tr>
<td>- Heating fuels;</td>
</tr>
<tr>
<td>- Steam; and</td>
</tr>
<tr>
<td>- Other (e.g., chilled or hot water for campus/district systems) Note: This may reflect new technology that uses other energy sources as long as they are measurable.</td>
</tr>
</tbody>
</table>

**Informational Reference(s):**
- International Performance Measurement and Verification Protocol; DOE/EE-0157; December 1997

**Maximum = 2 points**
- One point is earned where there is a definition of a constant feedback loop process in the plan for defining improvements in the efficiency of energy usage, based upon review and analysis of the gathered building level meter monitoring documentation.
- One point is earned where the gathered data is provided for review by occupants and visitors with up-to-date or real-time information on space energy consumption.

---

<table>
<thead>
<tr>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>The action plan has a process for implementing changes identified as a result of the analysis of the monitoring of energy use. The action plan addresses a minimum of two of the following systems:</td>
</tr>
<tr>
<td>- Lighting and lighting controls by floor or by zones;</td>
</tr>
<tr>
<td>- Plug loads by floor or by zones;</td>
</tr>
<tr>
<td>- Major electric HVAC equipment (e.g., chillers, cooling towers, AHU fans, pumps) 5 HP or greater;</td>
</tr>
<tr>
<td>- Chilled water generation;</td>
</tr>
<tr>
<td>- On-site renewable energy power generation;</td>
</tr>
</tbody>
</table>

**Maximum = 3 points**
- One point is earned where there are provisions in the plan that mandate the creation of improvement goals, identified based upon the automated data collection of monitored meter usage information for two or more of the listed systems.
- Two points are earned where there is definition of a process for implementing improvements in energy usage to reach the stated goals, based upon review and analysis of the gathered documentation for two or more of the listed systems.
- Heating water or steam generation; AND/OR
- Specialty or process electrical equipment.

**8.5.3 Verification**

Savings are determined at the whole-building level by measuring energy use at main *meters* or *sub-meters* or using whole-building simulation calibrated to measured energy use data.

**Informational Reference(s):**
- International Performance Measurement and Verification Protocol; DOE/EE-0157; December 1997

**9 points**
- Nine points are earned where verification documentation that the energy data gathered, analysis performed, and computation of energy efficiency is consistent with the objectives of the design intent of the project is provided.

**8.5.3.2** Install a fault detection and diagnostic system (FDD) on HVAC and lighting systems with the ability to detect the following:

- Economizer operation;
- Simultaneous heating and cooling;
- Photocell malfunction; and
- Additional HVAC and lighting setpoints.

**1 point or N/A**
- Not applicable for buildings without a Building Automation System (BAS).

**8.5.4 Recommended Documentation**

- Cut sheets for *meters* and *meter reading equipment*;
- Description of the monthly monitoring and verification reports that will be sent to building management and the process for constant feedback evaluation for improvement;
- Verification protocol report;
- Mechanical and electrical plans that clearly show what utilities are *metered*, what major end-uses are *sub-metered*;
- Resource Management Plan in the Operations and Maintenance Manual for both building level and *sub-metering* applications.

**8.6 Renewable Sources of Energy (40 points)**

**8.6.1 On-Site Renewable Energy**
### 8.6.1.1 Conduct a study to determine the technical feasibility and life cycle cost effectiveness of on-site renewable energy. The study considers an on-site renewable energy system that provides at least 2% of the total building annual energy cost.

**Informational Reference(s):**
- Guide to Integrating Renewable Energy in Federal Construction

5 points

### 8.6.1.2 Use the recommendations of a Feasibility Study, or other owner’s project requirements to implement on-site renewable energy system(s).

**Maximum = 25 points or N/A**

- One point is earned for each percent of project energy produced by on-site renewable energy systems to a maximum of 25 points.
- Not applicable where Feasibility Study was completed, and implementation was found to be not life cycle cost effective.

### 8.6.2 Off-Site Renewable Energy Credits

#### 8.6.2.1 The building owner commits to signing a contract to purchase Renewable Energy Certificates (RECs), either certified Green Power (US Dept. of Energy) listed renewable energy credit products or other certified RECs or carbon offsets, with a minimum three-year commitment.

- Renewable energy supplied as part of a utility provider portfolio may be considered towards earning this credit for systems utilizing 10% or greater of power from appropriate sources.

- Buildings using the prescriptive path and that don’t otherwise have an energy model may base the percentage of renewable energy on median EUI from CBECs for the building type.

**Maximum = 10 points**

Points are earned where renewable energy supplies a percentage of the building’s energy:
- Ten points are earned for 100%.
- Nine points are earned for 90%.
- Eight points are earned for 80%.
- Seven points are earned for 70%.
- Six points are earned for 60%.
- Five points are earned for 50%.
- Four points are earned for 40%.
- Three points are earned for 30%.
- Two points are earned for 20%.
- One point is earned for 10%.
- No points are earned for less than 10%.

### 8.6.3 Recommended Documentation

- Construction documents
- Descriptive documentation of the utility provider’s renewable energy sources used to provide consumable energy at the project;
- Executed agreements on “green” power or REC contracts;
• Manufacturer’s specifications, cut sheets, and performance documentation;
• On-site renewable energy feasibility studies;
• Study and financial evaluation for implementation.
9. WATER EFFICIENCY (190 points)

9.1 Indoor Domestic Plumbing (56 points)
Where installed in the project and as permitted by local codes, plumbing fixtures and fittings are certified and listed as being compliant with the requirements of the U.S. EPA’s WaterSense Program where WaterSense specifications exist.

Four paths are provided for assessing Indoor Domestic Plumbing. **If no path is achieved 75 total points are deducted from total earned points in the Water Efficiency Assessment Area:**

- **Path A:** ANSI/ASHRAE/USGBC/IES Standard 189.1-2014, Section 6.3.2.1: 54 points
  OR
- **Path B:** 2015 International Green Construction Code (IgCC), Table 702.1: 54 points
  OR
- **Path C:** 2015 IAPMO Green Plumbing & Mechanical Code Supplement Section 402: 54 points
  OR
- **Path D:** Major Renovations: 45 points. Not an eligible path for New Construction.

Points cannot be combined between paths. Select one of the paths below.

<table>
<thead>
<tr>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.1.1 Plumbing fixtures and fittings comply with ANSI/ASHRAE/USGBC/IES Standard 189.1-2014, Section 6.3.2.1.</td>
</tr>
<tr>
<td>- Not applicable where no fixtures or fittings exist.</td>
</tr>
<tr>
<td>- Not applicable where Path B, C or D is followed.</td>
</tr>
</tbody>
</table>

OR

<table>
<thead>
<tr>
<th>9.1.2 Path B: 2015 International Green Construction Code (IgCC)</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.2.1 Plumbing fixtures and fittings comply with the 2015 International Green Construction Code (IgCC), Table 702.1.</td>
</tr>
<tr>
<td>- Not applicable where no fixtures or fittings exist.</td>
</tr>
<tr>
<td>- Not applicable where Path A, C or D is followed.</td>
</tr>
</tbody>
</table>

OR

<table>
<thead>
<tr>
<th>9.1.3 Path C: 2015 IAPMO Green Plumbing &amp; Mechanical Code Supplement</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.3.1 Plumbing fixtures and fittings comply with 2015 IAPMO Green Plumbing &amp; Mechanical Code Supplement, Section 402.</td>
</tr>
<tr>
<td>- Not applicable where no fixtures or fittings exist.</td>
</tr>
<tr>
<td>- Not applicable where Path A, B or D is followed.</td>
</tr>
</tbody>
</table>

OR

<table>
<thead>
<tr>
<th>9.1.4 Path D: Major Renovations</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.4.1 New construction is not eligible for Path D.</td>
</tr>
</tbody>
</table>

Points are earned when plumbing fixtures and fittings installed in the project meet or exceed
requirements for maximum water consumption as listed below and are certified as being compliant with the requirements of the U.S. EPA’s WaterSense Program where WaterSense specifications exist.

- Toilets (Maximum flush volume 1.28 gal. (4.8 L) per flush);
- Urinals (Maximum flush volume 0.5 gal. (1.9 L) per flush);
- Showerheads (Maximum flow rate 2.0 gal. (7.6 L) per minute);
- Residential lavatory faucets (Maximum flow rate 1.5 gal. (5.7 L) per minute);
- Residential kitchen faucets (Maximum flow rate 2.2 gal. (8.3 L) per minute); and
- Non-residential lavatory faucets (Maximum flow rate 0.5 gal. (1.9 L) per minute).
- Pre-rinse spray valves (Maximum flow rate 1.28 gal. (4.8 L) per minute)

- One point is earned where at least 80% of each fixture type meets credit requirements; and
- Four points are earned where 90% of each fixture type meets credit requirements; and
- Forty-five points are earned where at least 98% of each fixture type meets credit requirements.
- Seventy-five total points are deducted if less than 80% of each fixture and fitting type meets credit requirements as listed in Path D. (Note: Points are deducted from the Water Assessment Area)
- Not applicable where no fixtures or fittings exist.
- Not applicable where Path A, B or C is followed.

Complete regardless of the path chosen above.

### 9.1.5 Residential Indoor Appliances

#### 9.1.5.1 Residential clothes washers are ENERGY STAR labeled and possess a maximum water factor (WF) of 5.4 gal/ft.\(^3\) (720 L/m\(^3\)) per full cycle.

<table>
<thead>
<tr>
<th>Points</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Not applicable where there are no clothes washers.</td>
</tr>
</tbody>
</table>

#### 9.1.5.2 Residential dishwashers are ENERGY STAR labeled and possess a maximum water use of 3.8 gal/ft.\(^3\) (510 L/m\(^3\)) per cycle.

<table>
<thead>
<tr>
<th>Points</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Not applicable where there are no dishwashers.</td>
</tr>
</tbody>
</table>

### 9.1.6 Recommended Documentation

- ENERGY STAR labeling;
- Manufacturer has published fixture flush and flow rates;
- Manufacturer’s published water use rates;
- WaterSense labeling.

### 9.2 Cooling Towers (24 points)

#### 9.2.1 Cooling Towers

##### 9.2.1.1 Cooling towers minimize the amount of make-up water required by achieving one of the following:

- A minimum of 5 cycles of concentration for make-up water having less than or equal to 200 ppm (200 mg/L) total hardness as calcium

<table>
<thead>
<tr>
<th>Maximum</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>13</td>
<td>Five points are earned where cooling towers achieve the respective threshold cycles of concentration.</td>
</tr>
<tr>
<td>N/A</td>
<td>Four points are earned when either;</td>
</tr>
</tbody>
</table>

carbonate or 3.5 cycles for *makeup water* with more than 200 ppm (200 mg/L) total hardness as calcium carbonate;  
OR  
• A minimum discharge conductivity of 1500 micromhos/cm or a maximum of 150 ppm (150 mg/L) of silica measured as silicon dioxide.

| 9.2.1.1 | 6 cycles are achieved where the tower target performance metric is defined in 9.2.1.1 as 5; OR  
|         | where 4.5 cycles are achieved where the target performance metric is defined in 9.2.1.1 as 3.5 and these cycles of concentration are sustained while maintaining the defined threshold water quality parameters in 9.2.1.1.  
|         | Four points are earned where at least 25% of a cooling tower’s annual *makeup water* is from safe and approved alternative non-potable sources.  
|         | Not applicable where there are no wet-cooling towers.

| 9.2.1.2 | Use advanced predictive or tracking tower control systems to mediate cooling tower makeup and discharge. Possible examples include integrated systems with occupancy sensors estimating demand, tracer based monitoring systems, etc.

| Maximum = 7 points or N/A |  
| 2 point or N/A |  
| • Not applicable where there are no evaporative towers.

| 9.2.1.3 | For the purposes of reducing evaporated water losses, at least 20% of annual cooling demands are made up by non-evaporative cooling.

| 2 points or N/A |  
| Maximum = 7 points or N/A |  
| • Seven points are earned where ≥75% and <100% of annual evaporative cooling demands are replaced by non-evaporative cooling.  
| • Four points are earned where >50% and <75% of annual evaporative cooling demands are replaced by non-evaporative cooling.  
| • Two points are earned where ≥20% and <50% of annual evaporative cooling demands are replaced by non-evaporative cooling.  
| • No points are earned where <20% of annual evaporative cooling demands are replaced by non-evaporative cooling.  
| • Not applicable where evaporative cooling is not required.

| 9.2.1.4 | Equip Cooling tower(s) with *drift eliminators* that achieve an efficiency of 0.001% or less for *counterflow systems*;  
| OR | 0.002% or less for *crossflow systems*.  

| 2 points or N/A |  
| 2 points or N/A |  
| • Two points are earned where *drift eliminators* achieve the specified efficiency for either *counterflow* or *crossflow systems*.  
| • Not applicable where there are no wet-cooling towers.

| 9.2.2 Recommended Documentation |  
| • Construction documents; |
9.3 Boilers and Hot Water Systems (10 points)

9.3.1 Boilers and Water Heaters

9.3.1.1 Boilers AND/OR water heaters have the following features:

- **9.3.1.1.1:** Boiler systems with over 50 BHP have condensate return systems;
- **9.3.1.1.2:** Non-steam boilers have conductivity controllers; AND/OR
- **9.3.1.1.3:** Steam boilers have conductivity meters.

Maximum = 3 points or N/A

- Two points are earned where boiler systems with over 50 BHP have condensate return systems.
  - Not applicable where there will be no steam boilers or where steam boilers are less than 200 BHP.
- One point is earned where boilers have conductivity controllers and meters.
  - Not applicable where there are no boilers

9.3.2 Domestic Hot Water Systems

9.3.2.1 Hot Water Volume: Conserve energy and water by designing efficient hot water delivery piping systems to one of the following:

- A maximum of 48 oz. from a water heater AND/OR a maximum of 24 oz. from a recirculation or similar hot water line; OR
- A maximum of 64 oz. from a water heater AND/OR a maximum of 24 oz. from a recirculation or similar hot water line; OR
- A maximum of 96 oz. from a water heater AND/OR a maximum of 36 oz. from a recirculation or similar hot water line.

Maximum = 4 points

- Four points are earned where there is a maximum of 48 oz. from a water heater AND/OR a maximum of 24 oz. from a recirculation or similar hot water line.
- Three points are earned where there is a maximum of 64 oz. from a water heater AND/OR a maximum of

24 oz. from a recirculation or similar hot water line.

- Two points are earned where there is a maximum of 96 oz. from a water heater AND/OR a maximum of 36 oz. from a recirculation or similar hot water line.

9.3.2.2 Reduce hot water waste to lavatory sinks, kitchen sinks, and showers by use of hot water recirculating systems that use occupant sensors, occupant controls, and thermocouples to reduce waiting times and water purged down the drain.

Note: Continuously operating recirculation systems and recirculation systems on timers are not eligible for this credit.

Maximum = 3 points

- Three points are earned where >90% of the hot water fixtures listed are served by a hot water demand system.
- Two points are earned where ≥75 and ≤90% of the hot water fixtures listed are served by a hot water demand system.
No points are earned where <75% of the hot water fixtures listed are served by a hot water demand system.

9.3.3 Recommended Documentation
- Certificate from professional engineer for steam system;
- Construction documents and piping layout;
- Manufacturer’s specifications and instructions, cut sheets, and performance documentation for boilers, water heating systems, meter, controllers, appliances and steam system plans.

9.4 Water Intensive Applications (21 points)

9.4.1 Commercial Food Service Equipment

9.4.1.1 Food services avoid water intensive equipment as follows:
- 9.4.1.1.1: The project does not include once-through water-cooled equipment; AND
- 9.4.1.1.2: The project does not include water-fed food waste disposers.

Maximum = 2 points or N/A
- One point is earned where food services avoid water intensive equipment per each listed item up to a maximum of 2 points.
- Not applicable where there are no commercial food service facilities.

9.4.1.2 The following appliances and fittings meet the prescribed limits for water usage:
- 9.4.1.2.1: Combination ovens consume 1.5 gal per pan/hr. (39 L/hr.) or less in the steamer mode. N/A where there are no combination ovens;
- 9.4.1.2.2: Pre-rinse spray valves comply with the requirements of the U.S. EPA’s WaterSense Program and consume 1.28 gal/min (4.8 L/min) or less;
- 9.4.1.2.3: Boilerless/connectionless food steamers consume 2 gal/hr./compartment (7.5 L/hr.) or less.
  - N/A where there are no food steamers;
- 9.4.1.2.4: Dishwashers comply with ENERGY STAR requirements and consume 1.6 gal/rack (6.1 L/rack) or less. Rackless flight-type dishwashers consume 160 gal/hr. (605.7 L/hr.) or less.

Maximum = 5 points or N/A
- One point is earned where each listed appliance or fitting meets the specified water usage limits up to a maximum of 5 points.
- Not applicable where the listed appliance or fitting is not present.
### 9.4.1 Dishwashers
- **9.4.1.2.5**: Ice Makers comply with ENERGY STAR requirements where such requirements exist.
- **N/A** where there are no ice makers.

### 9.4.2 Laboratory and Medical Equipment

#### 9.4.2.1
- Equip *Steam sterilizers* with the following:
  - **9.4.2.1.1**: *Mechanical vacuum systems*; and
  - **9.4.2.1.2**: *Water tempering devices* that only allow water to flow when the discharge of condensate or hot water from the sterilizer exceeds 140°F (60°C).

#### 9.4.2.2
- Specify *Dry vacuum systems* for all medical/dental purposes.

### 9.4.3 Laundry Equipment

#### 9.4.3.1
- Coin- or card-operated laundromat machines meet the prescribed *water factor (WF)* performance as follows:
  - Laundromat *clothes washers, single-load* have a *WF* of 4.0 or less and comply with ENERGY STAR requirements; AND/OR
  - *Clothes washers, Multi-load* have a *WF* of 8.0 or less.

#### 9.4.3.2
- Laundry equipment in industrial laundry facilities include the following features and systems:
  - *Clothes washers, Tunnel clothes washers* can be programmed to use a specific amount of water depending on the soil level of the material to be washed;
  - Maximum water consumption of *washers* is 1.0 gal/lb. (8 L/kg); AND
  - *Washers* have a water recycling system.

#### 9.4.3.3
- In an on-premise/institutional laundry, *clothes washers and washer-extractors* have a maximum *WF* of 8.0.

### 9.4.4. Water Features and Pools
### 9.4.4.1 Water features
Water features re-circulate water for reuse within the system and have a leak/water loss detection system.

<table>
<thead>
<tr>
<th>1 points or N/A</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Not applicable where there are no water features.</td>
</tr>
</tbody>
</table>

### 9.4.4.2 Water features
Water features use alternate water sources of non-potable water for make-up water.

<table>
<thead>
<tr>
<th>1 point or N/A</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Not applicable where there are no water features.</td>
</tr>
</tbody>
</table>

### 9.4.4.3 Pools and spas
Pools and spas or water features have an evaporation reduction/mitigation feature (e.g., pool covers, storage of feature water in underground tanks, controls to curtail use during high loss periods, etc.).

<table>
<thead>
<tr>
<th>1 point</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Not applicable where there are no pools, spas, or water features.</td>
</tr>
</tbody>
</table>

### 9.4.4.4 Equip
Equip pools and spas with splash out troughs to recover water.

<table>
<thead>
<tr>
<th>1 point</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Not applicable where there are no pools or spas.</td>
</tr>
</tbody>
</table>

### 9.4.4.5 Pools and spa backwash water
Pools and spa backwash water is treated and recovered for appropriate reclamation, recycling, AND/OR irrigation.

<table>
<thead>
<tr>
<th>1 point</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Not applicable where there are no pools or spas.</td>
</tr>
</tbody>
</table>

### 9.4.4.6 Use-regenerative sorptive media
Use-regenerative sorptive media (not conventional filtration or standard sand-based filtration) or cartridge filtration for pools and spas.

<table>
<thead>
<tr>
<th>1 point</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Not applicable where there are no pools or spas.</td>
</tr>
</tbody>
</table>

### 9.4.5 Recommended Documentation
- Construction documents;
- Description of alternate water sources to be used;
- Manufacturer’s specifications, cut sheets, and performance documentation for pre-rinse spray valves, ice machines, food steamers, dishwashers, and combination ovens;
- Manufacturer’s specifications, cut sheets and performance documentation for steam sterilizers, laboratory or medical equipment using non-potable water for once through cooling, water recycling units, and wet scrubbers;
- Manufacturer’s specifications, cut sheets, and performance documentation for all special water features and for all meters;
- Plumbing plans.

### 9.5 Water Treatment (4 points)

#### 9.5.1 Water Treatment for End Uses

<table>
<thead>
<tr>
<th>1 point or N/A</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Not applicable where there is no water treatment system.</td>
</tr>
</tbody>
</table>
9.5.1.2 Provide reverse osmosis that achieves one of the following:
- Rejects less than 70% of feed-water volume for a system that produces less than 100 gal. (380 L) per day;
- Rejects less than 60% of feed-water volume for a system that produces more than 100 gal. (380 L) per day.

Maximum = 2 points or N/A
- Two points are earned where reverse osmosis rejects less than 60% of feed-water volume.
- One point is earned where reverse osmosis rejects less than 70% of feed-water volume.
- Not applicable where there is no water treatment system.

9.5.1.3 Water softeners are demand-initiated, equipped with recharge controls based on volume of water treated or hardness and not on clock timers.

1 point or N/A
- Not applicable where there is no water treatment system.

9.5.2 Recommended Documentation
- Construction documents;
- Manufacturer’s specifications, cut sheets, and performance documentation for filtration systems, pressure drop gauges, reverse osmosis systems, water softeners, and recharge controls.

9.6 Alternate Water Sources (28 points)

9.6.1 Alternate Water Sources for Indoor Uses

9.6.1.1 Use non-potable water for indoor purposes.

Informational Resource(s):
- EPA’s Guidelines for Water Reuse

Maximum = 10 points or N/A
Points are earned based on the percentage of indoor water demands met with non-potable water:
- Ten points are earned for >75%.
- Eight points are earned for >50 and ≤75%.
- Six points are earned for ≥25% and ≤ 50%.
- Three points are earned for ≥15% and ≤ 24%.
- No points are earned for <15%.
- Not applicable where the authority having jurisdiction prohibits the use of alternate water sources for indoor applications.

9.6.1.2 One of the following systems is at least 80% pre-plumbed (pipes and valves) during construction:
- Graywater;
- Reclaimed water;
- Recycled water;
- Stormwater; AND/OR
- Rainwater.

2 points
Pre-plumbed systems are marked or otherwise identified as such.

</tbody>
</table>

### 9.8.2 Recommended Documentation

- *Construction documents;*
- Landscape architect/designer approved irrigation plan;
- Manufacturer’s specifications, cut sheets, and performance documentation.
10. MATERIALS (150 points)

10.1 Whole Building Life Cycle Assessment (30 points)

10.1.1 Whole Building Life Cycle Assessment

10.1.1.1 The project team evaluates a minimum of two different building designs using ASTM E2921-13 and the following assessment protocol to select the building with the lower environmental impact.

Assessment protocol:

The life cycle assessment reports the following life cycle impact indicators:
- Global warming potential (GWP)/climate change;
- Acidification potential;
- Eutrophication potential;
- Ozone depletion potential (ODP); and
- Smog potential.

The proposed final design of the building with the lower anticipated environmental impact achieves the following performance targets compared to the reference design:
- A minimum 5% reduction each, for at least three impact indicators, one of which is global warming potential; and
- No other impact indicator exceeds the reference design by more than 5%.

Operating energy consumption and MEP systems can be included. A registered design professional verifies structural material quantities, with the exception of existing buildings.

Informational Reference(s):
- SimaPro Sustainability Life Cycle Assessment Carbon Footprinting: http://www.simapro.co.uk/ (last accessed 6/20/17)
- Tally™: http://choosetally.com/ (last accessed 6/20/17)

Maximum = 30 points

Points are earned where the following percentage reduction is demonstrated by adding at least three impact indicators:
- Thirty points are earned for a total 25% or greater reduction.
- Twenty-eight points are earned for a total 24% reduction.
- Twenty-six points are earned for a total 23% reduction.
- Twenty-four points are earned for a total 22% reduction.
- Twenty-two points are earned for a total 21% reduction.
- Twenty points are earned for a total 20% reduction.
- Eighteen points are earned for a total 19% reduction.
- Sixteen points are earned for a total 18% reduction.
- Fourteen points are earned for a total 17% reduction.
- Twelve points are earned for a total 16% reduction.
- Ten points are earned for a total 15% reduction.
10.2 Product Life Cycle (29 Points)

10.2.1 Product Life Cycle

10.2.1.1 Product Manufacturers provide one or more of the following for a minimum of twenty products that at a minimum evaluate the cradle-to-gate product life cycle:

- Third party verified Type III Environmental Product Declarations (EPD) according to ISO 21930: 2007 or ISO 14025: 2006, either product specific or industry average;
- Third party Multiple Attribute Product Certification; AND/OR

Informational Reference(s):
- Multi-attribute Standard: products compared use the same MAS. Examples include the following:
  - NSF/ANSI 140-2015 Sustainability Assessment for Carpet
  - NSF/ANSI 332-2015 Sustainability Assessment for Resilient Flooring
  - NSF/ANSI 336-2011 Sustainability Assessment for Commercial Furnishings Fabric
  - NSF/ANSI 342-2014 Sustainability Assessment for Wallcovering Products
  - NSF/ANSI 347-2012 Sustainability Assessment for Single Ply Roof Membranes
  - ANSI/NSC 373-2014 Sustainability Assessment for Natural Dimension Stone
  - ANSI/BIFMA e3-2014: Business and Institutional Furniture Sustainability Standard (BIFMA e3) and Level® Sustainability Certification Program for Furniture
  - UL 100: Sustainability of Gypsum Boards and Panels (2012)
  - UL 102: Sustainability of Swinging Door Leafs (2009)

Maximum = 19 points

Points are earned where products include one of the listed third party verifications/certifications:
- Nineteen points are earned for 30 or more products.
- Fourteen points are earned for 29 products.
- Thirteen points are earned for 28 products.
- Twelve points are earned for 27 products.
- Eleven points are earned for 26 products.
- Ten points are earned for 25 products.
- Nine points are earned for 24 products.
- Eight points are earned for 23 products.
- Seven points are earned for 22 products.
- Six points are earned for 21 products.
- Five points are earned for 20 products.
- No points are earned for fewer than 20 products.
10.2.1.2 A minimum of five products include one or more of the following verifications that evaluate the products through end of life (cradle-to-grave product life cycle):

- Third party verified Type III Environmental Product Declarations (EPD) according to ISO 21930: 2007 or ISO 14025: 2006;
- AND/OR

Compliance with 10.2.1.2 can be used for 10.2.1.1

Informational Reference(s):
- Multi-attribute Standards (MAS): products compared use the same MAS. Examples include the following:
  - NSF/ANSI 140-2015 Sustainability Assessment for Carpet
  - NSF/ANSI 332-2015 Sustainability Assessment for Resilient Flooring
  - NSF/ANSI 336-2011 Sustainability Assessment for Commercial Furnishings Fabric
  - NSF/ANSI 342-2014 Sustainability Assessment for Wallcovering Products
  - NSF/ANSI 347-2012 Sustainability Assessment for Single Ply Roof Membranes
  - ANSI/NSC 373-2014 Sustainability Assessment for Natural Dimension Stone
  - ANSI/BIFMA e3-2014: Business and Institutional Furniture Sustainability Standard (BIFMA e3) and Level Sustainability Certification Program for Furniture
  - UL 100: Sustainability of Gypsum Boards and Panels (2012)
  - UL 102: Sustainability of Swinging Door Leaves (2009)

Maximum = 10 points

Points are earned where products are evaluated through end of life:
- Ten points are earned for 10 or more products.
- Nine points are earned for 9 products.
- Eight points are earned for 8 products.
- Seven points are earned for 7 products.
- Six points are earned for 6 products.
- Five points are earned for 5 products.
- No points are earned for fewer than 5 products.

10.3 Product Risk Assessment (19 points)

10.3.1 Screening-Level Product Risk Assessment

10.3.1.1 Select at least one formulated product or article that has a completed first, second, or third party screening-level product risk  

Maximum = 19 points
assessment in accordance with the chemical characteristics identified in NSF/GCI/ANSI 355: Greener Chemicals and Processes Information Standard, based on the product’s intended use, concentration of each chemical constituent within the product, and completion of a peer reviewed exposure model in accordance with 10.3.2; including, as a minimum, the following technically supported and applicable exposure scenario factors for either interior or exterior product categorized products: frequency, duration, amount utilized, ventilation rate, wind speed, and room/space size, or unlimited for unconfined spaces.

Points are earned for discrete products with different functional uses and not variations of the same product, unless the manufacturers show substantial difference between the chemical constituents or components. Where a product has both interior and exterior exposure, the screening-level product risk assessment is required for the interior exposure only.

Product Screening-Level Product Risk Assessment Reporting:
The product manufacturer provides a screening-level product risk assessment report that includes the following elements:
- Certification that their full product formulation underwent the screening-level product risk assessment, including each constituent chemical identified by applicable Chemical Abstract Service Number (CAS number) and the percentage (actual, estimated, or range %) of each constituent chemical in the formulation (de minimus of 0.1% for carcinogens and 1% for other hazardous ingredients); and
- Each screening-level product risk assessment for human health, safety and ecological impacts, is required based upon the NSF/GCI/ANSI-355 Chemical Characteristics, and the results are reported in the generic classification of Green (least risk), Yellow (second least risk), Orange (second most risk), and Red (most risk).

Note: Human health and safety risk and ecological screening-level product risk assessments may be completed separately by different entities.

Informational Reference(s):
- screening-level product risk assessment tools referencing NSF/GCI/ANSI 355: Greener Chemicals and Processes Information Standard AND/OR processes allowed by regulatory authorities, e.g. REACH, EPA, Health Canada or other sources (2011)

<table>
<thead>
<tr>

<tr>
<td>One point is earned for 1 product.</td>
</tr>
</tbody>
</table>

10.3.2 Recommended Documentation
Product Screening-Level Product Risk Assessment Report includes:
- Description of how the screening-level product risk assessment system/tool calculated the overall product risk, including both human health and safety, and ecological risks;
- Applicable routes of exposure (i.e., inhalation, dermal, oral) and exposure scenario factors used in the calculation;
- Underlying assumptions and other relevant information needed for an independent validation of the assessment process;
- Description of how the product risks were converted into the Green, Yellow, Orange and Red classifications; and
- The product screening-level product risk assessment report additionally includes documentation of the worst case constituent chemical acute and chronic exposure concentration and/or dosage and Risk Characterization Ratio (RCR) for the applicable product routes of exposure (i.e., inhalation, dermal, oral) utilizing the constituent chemical percentages in the product formulation and at least the additional exposure factors listed above. (Note: the worst case constituent chemical may be a different constituent chemical for each applicable product route of exposure, based upon their NSF/GCI/ANSI-355 chemical characteristic impacts.) In the public report proprietary product formulation, ingredient and/or percentage need not be revealed. Instead formulation constituents may be grouped and identified by functional role, hazard grouping, or other descriptors for the product.

### 10.4 Sustainable Materials Attributes (10 points)

**10.4.1 Product Sustainable Materials Attributes**

<table>
<thead>
<tr>
<th>Points are earned based on adding percentages of materials, by material cost, that carry the pre-consumer recycled content, post-consumer recycled content, biobased content or third party sustainable forestry certification content attribute:</th>
</tr>
</thead>
</table>

\[
\text{Product Sustainable Attribute Material} = \text{Pre-consumer recycled content } \% + \text{Post-consumer recycled content } \% + \text{Biobased content } \% + \text{Third Party Sustainable Forestry Certification content } \%
\]

Points are earned where the Product Sustainable Attribute Material is between 11% and 29% or greater:
- Ten points are earned for \( \geq 28\% \).
- Nine points are earned for \( \geq 26\% \) and < 28%.
- Eight points are earned for \( \geq 24\% \) and <26%.
- Seven points are earned for \( \geq 22\% \) and <24%.
- Six points are earned for \( \geq 20\% \) and <22%.
- Five points are earned where for \( \geq 18\% \) and <20%.
- Four points are earned where for \( \geq 16\% \) and <18%.
- Three points are earned for \( \geq 14\% \) and <16%.
- Two points are earned for \( \geq 12\% \) and <14%.
- One point is earned for \( \geq 11\% \) and <12%.
- No points are earned for <11%.

Maximum = 10 points

Use the formula below to determine the percentages by cost of the products that carry the listed attributes. Only the portion of materials that has the identified attribute should be included. For example, if a product has 40% pre-consumer recycled content, only 40% of the value of that product is included.
Sustainable Attribute % = \( \frac{\text{Sum for all materials: (Portion of the Material with the Attribute \times materials cost)}}{\text{Total Material Value}} \)

Products that are claimed for credit under Third Party Sustainable Forestry Certification are not also included as biobased content.

*Biobased content* percentage may be calculated by weight or in accordance with ASTM D6866-16 Standard Test Methods for Determining the *Biobased Content* of Solid, Liquid, and Gaseous Samples Using Radiocarbon Analysis.

The following forest certification systems are recognized:

- Forest Stewardship Council (FSC): [https://us.fsc.org/en-us](https://us.fsc.org/en-us) (last accessed 8/30/17)
- Programme for the Endorsement of Forest Certification (PEFC): [https://www.pefc.org/](https://www.pefc.org/) (last accessed 8/30/17)

### 10.5 Reuse of Existing Structures and Materials (30 points)

#### 10.5.1 Structural Systems and Non-Structural/Interior Elements

<table>
<thead>
<tr>
<th>10.5.1.1 Structural systems (e.g. exterior walls, interior bearing walls, roof systems, floor systems) from an <em>existing building</em> on the site are retained and incorporated in the new design.</th>
<th>Maximum = 12 points</th>
</tr>
</thead>
<tbody>
<tr>
<td>Points are earned where a percentage of the existing <em>structural systems</em> is reused:</td>
<td><strong>Twelve points are earned for ( \geq 95% ) reuse.</strong></td>
</tr>
</tbody>
</table>

© Green Building Initiative, Inc. (www.thegbi.org). For personal use only. Additional reproduction, distribution or transmission in either print or digital form is not permitted without Green Building Initiative's prior written permission.
### Assessment Guidance:

**Percentage** = \( 100 \times \left( \frac{A}{B} \right) \), where:
- \( A \) = Total square footage of reused existing structural systems
- \( B \) = Total square footage of structural systems in the project

Wall Area is measured in the vertical plane and other structural systems are measured in the horizontal plane.

- Eleven points are earned for \( \geq 90\% \) and \(< 95\% \) reuse.
- Ten points are earned for \( \geq 85\% \) and \(< 90\% \) reuse.
- Nine points are earned for \( \geq 80\% \) and \(< 85\% \) reuse.
- Eight points are earned for \( \geq 75\% \) and \(< 80\% \) reuse.
- Seven points are earned for \( \geq 70\% \) and \(< 75\% \) reuse.
- Six points are earned for \( \geq 65\% \) and \(< 70\% \) reuse.
- Five points are earned for \( \geq 60\% \) and \(< 65\% \) reuse.
- Four points are earned for \( \geq 50\% \) and \(< 60\% \) reuse.
- Three points are earned for \( \geq 40\% \) and \(< 50\% \) reuse.
- No points are earned for \(< 40\% \) reuse.

---

### 10.5.1.2 Non-structural interior systems and finishes (e.g. ceiling, interior partitions, demountable walls, flooring, doors) from an existing building on the site are retained and incorporated in the new design.

**Maximum** = 10 points

Points are earned where a percentage of existing non-structural/interior systems and finished is reused:
- Ten points are earned for \( \geq 95\% \) reuse.
- Nine points are earned for \( \geq 85\% \) and \(< 95\% \) reuse.
- Eight points are earned for \( \geq 75\% \) and \(< 85\% \) reuse.
- Seven points are earned for \( \geq 65\% \) and \(< 75\% \) reuse.
- Six points are earned for \( \geq 55\% \) and \(< 65\% \) reuse.
- Five points are earned for \( \geq 45\% \) and \(< 55\% \) reuse.
- Four points are earned for \( \geq 35\% \) and \(< 45\% \) reuse.
- Three points are earned for \( \geq 25\% \) and \(< 35\% \) reuse.
- Two points are earned for \( \geq 15\% \) and \(< 25\% \) reuse.
- One point is earned for \( \geq 10\% \) and \(< 15\% \) reuse.
- No points are earned for \(< 10\% \) reuse.

---

### 10.5.2 Material Reuse from Off-Site

#### 10.5.2.1 The project incorporates reused, refurbished AND/OR off-site salvaged materials in place of new materials (except furnishings).

**Maximum** = 4 points
Assessment Guidance:
Percentages are calculated as the percentage of the total materials cost.

Percentage = 100 x (A ÷ B), where:
A = Total value of reused materials
B = Total value of materials

The value of the reused, refurbished, or salvaged material is the greater of the cost of the reused, refurbished or salvaged material or the cost of new comparable material which is being avoided.

| 10.5.2.2 Furnishings (including systems furniture) are reused, salvaged AND/OR refurbished for reuse within the project. |
| Assessment Guidance: Percentages are calculated as the percentage of the total furnishings cost. |
| Percentage = 100 x (A ÷ B), where: A = Total value of reused furnishings B = Total value of furnishings |

Points are earned where a percentage of materials is reused, refurbished, AND/OR salvaged from off-site:
- Four points are earned for ≥20% of materials.
- Three points are earned for ≥10% and <20% of materials.
- Two points are earned for ≥5% and <10% of materials.
- One point is earned for ≥2% and <5% of materials.
- No points are earned for <2% of materials.

Maximum = 4 points or N/A

Points are earned where a percentage of existing furnishings is reused:
- Four points are earned for ≥30% of existing furnishings.
- Three points are earned for ≥20% and <30% of existing furnishings.
- Two points are earned for ≥15% and <20% of existing furnishings.
- One point is earned for ≥10% and <15% of existing furnishings.
- No points are earned for <10% of existing furnishings.
- Not applicable where there are no existing furnishings or if it is not feasible to reuse existing furnishings.

10.5.3 Recommended Documentation

- Calculation for area of existing major structural systems reused;
- Calculation for percentage of furniture reused;
- Calculation for percentage of off-site material reused onsite;
- Calculations for surface area of existing non-structural elements reused;
- Construction documents;
- Manufacturer’s specifications, cut sheets, and performance documentation (if applicable).

10.6 Waste (22 points)

10.6.1 Construction Waste

10.6.1.1 A preconstruction waste management plan is created prior to any construction or demolition activities. This plan describes the project team’s strategy for reducing construction waste and diverting materials from landfilling via reuse or recycling.

The preconstruction waste management plan will include: (Continued from 10.6.1.1)
- The strategies planned for construction waste reduction, salvaging, recycling, returning to supplier/manufacturer, or other methods for diverting waste from landfill;
- The facility, hauler, or service provider that will handle each material being diverted;
- Whether construction and demolition materials will be separated on-site or commingled;
- The name and contact information for the person(s) responsible for developing and implementing the waste management plan;
- Reporting and record keeping provisions;
- Target construction waste rate per 10.6.1.3 below; and
- Target waste diversion rate.

10.6.1.2 A final waste management summary report is completed after construction documenting the results of the implementation of the preconstruction waste management plan, including:

- The weight or volume of the total quantity of construction and demolition waste;
- The calculated construction waste per unit area for the project (see 10.6.1.3 below);
- The weight or volume of the major categories of materials that were reused or recycled;
- The reuse/recycling rate for each major category of waste material;
- The overall reuse/recycling rate for the project;
- A description of whether materials are managed through source separation or comingling;
- Copies of receipts and invoices used to track the progress of the waste management effort;
- A statement that describes if a waste recycling facility was used whether it was certified by a government or non-government organization;
- The organization and contact information of the author of the waste management summary report and the name and contact information of the person(s) at the off-site recycling facility (or facilities) responsible for data collection and reporting.

10.6.1.3 Minimize construction waste, per unit area of new building floor area, generated in new portions of buildings.

Construction waste includes that which is hauled from the site, whether diverted, landfilled, incinerated, or otherwise disposed of.

<table>
<thead>
<tr>
<th></th>
<th>Maximum = 8 points</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Eight points are earned where waste is less than or equal to 1.2 lbs./ft² (5.9 kgf/m²) of the new building floor area.</td>
</tr>
<tr>
<td></td>
<td>Five points are earned where waste is 1.2 lbs./ft² (5.9 kgf/m²) to 2.0 lbs./ft²</td>
</tr>
</tbody>
</table>
10.6.1.4 Construction waste, including building demolition waste and packaging, is diverted from the landfill through recycling, reuse, repurposing, or composting.

The amount of construction waste that is used for waste-to-energy combustion is multiplied by 0.5 when counted as waste diverted from landfill. Waste-to-energy facilities have a combustion efficiency rate of 60% or more.

Soil and land-clearing debris and materials used as alternative daily cover at landfills are not included in these calculations.

Calculations may be performed based on weight or volume, but the same basis is used throughout this credit. Where calculations are performed to convert waste from weight to volume or volume to weight, the source of these conversions is stated.

</tr>
</tbody>
</table>

10.6.2 Post Occupancy Solid Waste Recycling

10.6.2.1 The building design addresses recycling for solid waste using one or more of the following:

- **10.6.2.1.1**: Capacity: Provide recycling collection capacity as follows:
  - Multi-family: Minimum of 0.0625 CY per resident; or
  - Office and Retail: Minimum of 0.035 CY per full time employee; or
  - Schools: Minimum of 0.010 CY per student;

- **10.6.2.1.2**: Interior Storage Requirements:
  Building design addresses interior storage of recyclables in accordance with one or more of the following space layouts, as required to meet minimum capacity for scheduled collection and any security or safety needs:
  - In-cabinet or under-counter/work station collection bins;
  - A minimum of one collection bin centrally located on each floor;
  - A separate and secure collection area for a single material stream; AND/OR

Maximum = 2 points

- Two points are earned where two or more of the listed items are used to address recycling for solid waste.
- One point is earned where one of the listed items is used to address recycling for solid waste.
Recycling chutes that empty into dedicated recycling collection bin;

- **10.6.2.1.3**: Exterior Storage Requirements:
  Building design addresses exterior recycling storage by providing adequate, accessible enclosures for recycling collection containers in size and number that meet minimum capacity requirements and the following:
  - Permanent, durable enclosures are sized to accommodate collection bins required for minimum recycling capacity;
  - Enclosures are screened on three sides; and
  - Enclosures are designed to accommodate minimum clearances for collection equipment.

### 10.6.3 Supply Chain Waste Minimization

**10.6.3.1** Products used in the construction of the building are selected from manufacturers who have minimized or diverted waste during the production/manufacturing of the products. This criterion applies gate-to-gate – to all material inputs and outputs to a facility (or facilities) that produce/manufacture finished products. The diversion rate is calculated for the entire facility (or facilities) in which the products were produced/assembled/manufactured, and not just for an individual product line.

Assessment Guidance:
The diversion rate is expressed as a percentage and calculated as follows:

\[
\text{Diversion Rate} = \left(1 - \frac{\text{Mass Landfilled + Mass Incinerated without Energy Recovery}}{\text{Mass Discarded Material}}\right)
\]

Waste materials generated from the recycling of an external waste stream as an incoming material should not be considered a “discarded material” and should not appear in either the denominator or numerator.

The Diversion Rate is multiplied by 1.5 for products that have been produced or manufactured in a facility that meets the following standards and certification programs:
- Business or facilities that have achieved Zero Waste certification from the US Zero Waste Business Council; or
- Have followed and certified to UL2799

Maximum = 4 points
- Four points are earned where \(\geq 50\%\), by cost, of building products used come from facilities that divert over 80% of their waste.
- Three points are earned where \(40\% \leq \text{cost} < 50\%\), by cost, of building products used come from facilities that divert over 80% of their waste.
- Two points are earned where \(30\% \leq \text{cost} < 40\%\), by cost, of building products used come from facilities that divert over 80% of their waste.
- One point is earned where \(20\% \leq \text{cost} < 30\%\), by cost, of building products used come from facilities that divert over 80% of their waste.
The following methods are accepted as valid diversion from landfill:

- Recycling;
- Returning to supplier;
- *Reuse* in same process;
- *Reuse* in different process;
- Processing and selling to third party;
- Commercial composting; AND/OR
- Waste-to-energy: the manufacturer removes, to the maximum practical extent, recyclable materials from the waste stream using common or front-end recycling methods before material is sent to the waste-to-energy operation. Final by-products of waste-to-energy processes are disposed of properly and, if sent to landfill, are included in the total mass discarded value. Facilities are compliant with applicable government emissions regulations and facility permits. The waste-to-energy process used is one of the following:
  - Bio-diesel or other biofuels;
  - Anaerobic digestion with energy recovery; or
  - Combustion with energy recovery where:
    - Combustion makes up less than 10% of the total waste by mass diverted; and
    - Combustion does not generate bottom ash or fly ash defined as hazardous by US CFR 261.24 (TCLP) or equivalent test for the jurisdiction of the incineration plant.

Informational Reference(s):

### 10.6.4 Recommended Documentation

- *Construction documents*;
- Manufacturer’s specifications;
- Preconstruction waste management plan;
- Verification to ZWIA or UL 2799;
- Waste management report.

### 10.7 Resource Conservation (10 points)

#### 10.7.1 Off-Site Fabrication for Construction Optimization

**10.7.1.1** The project incorporates building elements that are produced by one or both of the following methods, alone or in combination:

- **Modular Construction**
- **Prefabrication**.

Maximum = 4 points

Points are earned where a percentage of the building construction by cost, not including site work, is **Modular Construction AND/OR Prefabrication**:

- Four points maximum are earned for a minimum of 20%.
### 10.7.2 Design for Deconstruction (DFD)

10.7.2.1 The project teams document the application of design for deconstruction (DFD) principles in the design of the building and provides the Owner with a Deconstruction Plan that addresses both partial deconstruction (for renovations) and total deconstruction (for end of life removal) of the building to maximize the reuse and recycling of building components and materials.

### 10.7.3 Recommended Documentation

- Construction documents;
- Deconstruction Plan;
- Design specifications.
11. INDOOR ENVIRONMENT (150 points)

11.1 Air Ventilation and Quality (35 points)

11.1.1 Ventilation Air Quantity

11.1.1.1 The quantity of ventilation for the building is compliant with one of the following:

- The ICC International Mechanical Code (ICC IMC 2015);
- ANSI/ASHRAE/ASHE Standard 170-2013, Ventilation of Health Care Facilities; OR
- Local codes or standards (if more stringent).

Informational Reference(s):
- ANSI/ASHRAE Standard 62.1-2013
- ANSI/ASHRAE/ASHE Standard 170-2013
- ICC 2015 International Mechanical Code: section 605
- IAPMO 2015 Uniform Mechanical Code: Section 402

11.1.2 Air Change Effectiveness

11.1.2.1 The following strategies are implemented for ventilation systems when used:

- For mechanical ventilation systems, the zone air distribution effectiveness $E_z$ value is greater than or equal to 0.9 in all regularly occupied spaces, excluding circulation and transitional spaces.
- Natural ventilation systems are designed in accordance with Section 6.4 of ANSI/ASHRAE Standard 62.1-2013, or are designed using professionally accepted sophisticated analytical methods such as computational fluid dynamics.

The $E_z$ value is determined using Table 11.1.2.1.

<table>
<thead>
<tr>
<th>Air Distribution Configuration</th>
<th>$E_z$</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ceiling supply of cool air</td>
<td>1.0</td>
</tr>
<tr>
<td>Ceiling supply of warm air and floor return</td>
<td>1.0</td>
</tr>
<tr>
<td>Ceiling supply of warm air 15F or more above space temperature and ceiling return</td>
<td>0.8</td>
</tr>
<tr>
<td>Ceiling supply of warm air less than 15F above space temperature and ceiling return provided that the 150 fpm supply air jet reaches to within 4.5 ft. (1.37 m) of the floor level. Note: For lower velocity supply air, $E_z = 0.8$</td>
<td>1.0</td>
</tr>
<tr>
<td>Floor supply of cool air and ceiling return provided</td>
<td>1.0</td>
</tr>
</tbody>
</table>
that the 150 fpm supply jet reaches 4.5 ft. (1.37 m) or 
more above the floor. Note: Most underfloor air 
distribution systems comply with this provision.

Floor supply of cool air and ceiling return, provided 
low-velocity displacement ventilation achieves 
unidirectional flow and thermal stratification. 1.2
Floor supply of warm air and floor return. 1.0
Floor supply of warm air and ceiling return. 0.7
Makeup supply drawn in on the opposite side of the 
room from the exhaust AND/OR return. 0.8
Makeup supply drawn in near to the exhaust AND/OR 
return location. 0.5

1. “Cool air” is air cooler than space 
temperature.
2. “Warm air” is air warmer than the space 
temperature.
3. “Ceiling” includes any point above the 
breathing zone.
4. “Floor” includes any point below the 
breathing zone.
5. As an alternative to using the above values, E₂ 
may be regarded as equal to air change 
effectiveness determined in accordance with 
ANSI/ASHRAE 129-1997 (RA 02), Measuring 
Air Change Effectiveness for all air distribution 
configurations except unidirectional flow.

Informational Reference(s):

### 11.1.3 Air Handling Equipment

**11.1.3.1** Air handling equipment is equipped with 
filtration as follows:
- Air handling equipment that provides 
ventilation air (e.g. central mixed air 
equipment, make-up air equipment, 
ventilation equipment for “compartmental” 
systems such as fan coils or unitary heat 
pumps): minimum MERV 13; and
- Terminal equipment that circulates room or 
zone air (e.g. fan coils, unitary heat pumps): 
minimum MERV 8.

6 points or N/A
- Not applicable where non-ducted circulating 
unitary equipment serves only a single zone 
(e.g. unit heaters, force-flows).

**11.1.3.2** Interior liners that could harbor microbial 
growth AND/OR erode in the air stream are not 
utilized in any outdoor air, return air, and supply 
air ductwork, or any fan, coil, terminal, or other 
devices exposed to the airstream.

5 points or N/A
- Not applicable where a building does not have 
ductwork with radiant systems and operable 
windows.
### 11.1.4 CO₂ Sensing and Ventilation Control Equipment

<table>
<thead>
<tr>
<th>11.1.4.1 Densely occupied rooms (25 or more people per 1,000 ft.² (92.9 m²)) with variable occupancy (e.g. meeting rooms, assembly areas) have CO₂ sensing and ventilation control equipment.</th>
<th>6 points or N/A</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Not applicable where there are no densely occupied spaces with variable occupancy.</td>
<td></td>
</tr>
</tbody>
</table>

### 11.1.5 Recommended Documentation

- Air-handling equipment submittals;
- Balancing reports for the ventilation systems;
- *Construction documents* and specifications;
- Design drawings;
- Engineering drawings and specifications for ductwork;
- Filter submittals;
- HVAC drawings and specifications;
- List of regularly occupied zones and associated air distribution system;
- Local ventilation codes or standards;
- Occupant density calculation;
- Specifications for ventilation systems, CO₂ sensing and ventilation control equipment;
- Ventilation air quality design data;
- Ventilation schedule and tables.

### 11.2 Source Control and Measurement of Indoor Pollutants (35 points)

#### 11.2.1 Volatile Organic Compounds

11.2.1.1 Adhesives and sealants (not including carpet adhesives) that are applied on site within, or part of, the building envelope’s continuous plane of air tightness, comply with VOC content limits for 90% of products by volume AND/OR VOC emissions criteria for 70% of products by volume.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Maximum = 3 points

- Two points are earned where 70% of products by volume comply with VOC emissions criteria.
- One point is earned where 90% of products by volume comply with VOC content limits.
1. The VOC content must conform to the VOC limits in the South Coast Air Quality Management District (SCAQMD) Rule 1168 (January 7, 2005). VOC limits are expressed as grams of VOC per liter of adhesive or sealant less water and less exempt compounds, with no exception for chloroform, ethylene dichloride, methylene chloride, perchloroethylene, and trichloroethylene according to SCAQMD Rule 1168. For low-solid adhesives or sealants the VOC limit is expressed in grams per liter of material. SCAQMD Rule 1168.

Assessment Guidance:
Provide documentation indicating compliance with the VOC content requirements. Such documentation includes manufacturer declarations or a certification by a third party testing organization including, but not limited to, one of the following:

- UL EcoLogo – UL Environment
  - UL 2762 Sustainability for Adhesives, 2011
  - Green Seal GS-36 Adhesives for Commercial Use (July 12, 2013)

VOC emissions results are determined by either the California Department of Public Health’s Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, Version 1.1, February 2010; or UL 2821 GREENGUARD Certification Program Method for Measuring and (Continued from Table 11.2.1.1 Adhesives and Sealants VOCS)

Provide documentation indicating compliance with the VOC emission requirements as stated in the Standard Private Office Scenario in CDPH Standard Method V1.1 Tables 4.4 and 4.5 and Method V1.1, Table 4.1 does not exceed the maximum allowable concentrations or a certification by a certification body accredited to ISO/IEC 17065:2012 and with relevant certification program in the scope of its accreditation. Certification programs include but are limited to, one of the following:

- UL GREENGUARD Gold – UL Environment
  - UL 2818 GREENGUARD Certification Program for Chemical Emissions for Building Materials, Finishes and Furnishings, 2013
- FloorScore® Standard for flooring adhesives, 2015
- Indoor Advantage Gold™ – SCS Global Services

</tbody>
</table>

Maximum: 7 points
1.2.1.3.2: Acoustical and Thermal Insulation

1.2.1.3.3: Ceiling Systems (including acoustical ceiling and gypsum board)

1.2.1.3.4: Wall Systems (including wall coverings, gypsum board, and window shading devices)

Concrete, concrete masonry, clay brick, stone, glass and glass block masonry used in floors and wall systems without additional coating/sealers are deemed to comply without testing.

VOC emissions are determined by a third-party laboratory that is accredited to ISO/IEC 17025 with the specified test method listed in the scope of its accreditation. VOC emissions results are determined by California Department of Public Health (CDPH) “Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers,” V 1.1, 2010, Standard Private Office Scenario. Alternatively, VOC emission results are determined by UL 2821 “GREENGUARD Certification Program Method for Measuring and Evaluating Chemical Emissions from Building Materials, Finishes and Furnishings,” March 2013, Table 2 Office Model and Section 34.1 Allowable Limits for GREENGUARD Certification Gold.

Assessment Guidance:
Provide documentation indicating compliance with the VOC emission

Estimated for the Standard Private Office Scenario in CDPH Standard Method V1.1 Tables 4.4 and 4.5 and are compared to the maximum allowable concentrations in CDPH Standard Method V1.1, Table 4.1. Modeled concentrations do not exceed the maximum allowable concentrations. Additionally, floors/floor coverings, ceiling systems and wall systems categories made with nonstructural composite wood and composite wood cores (particleboard, MDF, and hardwood plywood) are compliant with the California Air Resources Board Airborne Toxic Control Measure (CARB/ATCM) to control formaldehyde emissions from composite wood (Sections 93120-93120.12, Title 17, California Code of Regulations).

Earned where floors/floor coverings comply with VOC emissions criteria.

- Three Points are earned where ceiling systems comply with VOC emissions criteria.
- One point is earned where acoustical and thermal insulation comply with VOC emissions criteria.
- One point is earned where wall systems comply with VOC emissions criteria.

- MAS Certified Green Furniture per ANSI/BIFMA M7.1-2011(R2016)
- SCS Indoor Advantage per ANSI/BIFMA M7.1-2011(R2016)

11.2.2 Pre-Occupancy Indoor Air Quality Testing
Two paths are available for assessing 11.2.2.

- Path A: Indoor Air Quality (IAQ) Pre-Occupancy Testing: 6 points
  OR
- Path B: Total Volatile Organic Compounds (TVOC): 3 points

Points cannot be combined between paths. Select one of the paths below.

11.2.2.1 Path A: Indoor Air Quality (IAQ) Pre-Occupancy Testing

11.2.2.1.1 To determine that the indoor air quality is acceptable upon Substantial Completion but prior to occupancy, the buildings indoor environments are tested using the U.S. EPA's Compendium of Methods for the Determination of Toxic Organic Pollutants in Ambient Air, TO-1, TO-11, TO-17, and ASTM D 5197-09e1 Standard Test Method for Determination of Formaldehyde and Other Carbonyl Compounds in Air (Active Sampler Methodology). The testing takes place after construction ends and prior to occupancy.

The test protocols are in accordance with the following:
- The VOC and Particulate Matter sampling and averaging times and measurement methods achieve the detection limits of the contaminant levels listed in Table 11.2.2.1.1 below;
- HVAC systems are operated at the minimum design outdoor air ventilation rate during testing;
- Air sampling and monitoring are at a height of 3-6 ft. (91-183 cm) from the floor and at least 3 ft. (0.9 m) away from walls and ventilation supply;
- The test protocols are documented to show that appropriate sampling methods and times were used; and
- The number of sampling locations are as follows for each portion of the building served by a separate ventilation system:
  - At Least one per contiguous floor; and
  - At Least one per 10,000 ft.² (929 m²) of floor area.

The sampling points include areas presumed to have the greatest source...
strength with the least ventilation.

2ANSI/ASHRAE/USGBC/IES Standard 189.1-2014 Table 10.3.1.4

For any area that fails to meet the requirements, the individual chemical(s) in the highest concentrations that are leading to failure are to be reviewed and the problem remedied.

**OR**

### 11.2.2.2 Path B: Total Volatile Organic Compounds (TVOC)

#### 11.2.2.2.1 Upon Substantial Completion, but prior to occupancy, conduct a TVOC indoor air sampling and laboratory analysis of collected samples as follows:

Sampling for TVOCs is conducted over a minimum four-hour period. All measurements are completed prior to occupancy, but during normal occupied hours, with the building ventilation starting at the normal daily start time and operated at the minimum outside air flow rate for the occupied mode throughout the duration of the testing.

Samples are taken using one of the following collection media:
- Thermal desorption tubes.
- Canisters.

Laboratory analysis is conducted in accordance with the following:
- VOC Range (Carbon): C$_6$ – C$_{16}$.
- Reference Compound: Toluene.

All interior finishes are in place at the time of testing. Non-fixed furnishings, such as workstations and partitions are encouraged, but not required to be installed at the time of testing;

Samples are collected for each portion of the building served by a separate air handling system. In each area served by a single air handler, samples are collected for each 25,000 ft.$^2$ (2,323 m$^2$) of floor space, or each contiguous floor space, whichever is larger. Samples include areas presumed to have the least ventilation, and the strongest presumed source strength.

Samples are collected at 3-6 ft. (91-183 cm) above the finished floor.

#### 3 points
- Three points are earned where the test is conducted. There is no pass/fail criteria for conducting this test.

### 11.2.3 Carbon Monoxide Monitoring

#### 11.2.3.1 Carbon monoxide monitoring devices and alarms are installed in enclosed areas where there are sources of combustion (i.e. stoves, ovens, grills, clothes dryers, furnaces, boilers, water heaters, heaters and fireplaces).

Informational References:
- NFPA 720 2015, CSA 6.19, UL 2034 or similar standard for detector

1 point or N/A
- Not applicable where there are no areas with combustion sources.
### 11.2.4 Legionellosis Mitigation in the Building Water Systems

<table>
<thead>
<tr>
<th>Informational Reference(s):</th>
<th>3 points</th>
</tr>
</thead>
</table>

### 11.2.5 Pest and Contamination Control

11.2.5.1 The following integrated pest management strategies are used:

- Outdoor air inlets have insect screens of 18x14 mesh for plenum systems feeding multiple air handlers;
- Structural and mechanical openings are fitted with permanent protection (e.g. screens, sealants, etc.);
- Advertising signs and other assemblies affixed to the building façade are designed and constructed in a way that reduces bird habitation, and penetrations in the façade are sealed to prevent entry; and
- Mullions and ledges are less than 1 in. (2.5 cm) deep to discourage bird roosting.

11.2.5.2 The building has a sealed storage area for food/kitchen solid waste and recycling.

<table>
<thead>
<tr>
<th>1 point</th>
</tr>
</thead>
</table>

### 11.2.6 Other Indoor Pollutants (Tobacco, Radon)

11.2.6.1 An occupancy policy prohibits smoking. Signage is posted at every building entrance prohibiting smoking and the use of electronic cigarettes within 25 ft. (7.6 m) of the building.

Smoking is defined as the inhalation of smoke of burning tobacco, use of electronic-cigarettes or other substances encased in items such as (but not limited to) cigarettes, pipes, and cigars for recreational or medical use.

11.2.6.2 The following measures are taken to address radon:

- 11.2.6.2.1: A site-specified assessment of radon potential is conducted; AND
- 11.2.6.2.2: Radon prevention and mitigation measures are implemented as indicated by the assessment.

<table>
<thead>

</tr>
</thead>
</table>
pollutants are:

- provided with separate ventilation AND/OR exhaust systems capable of maintaining the space at a negative pressure of at least 5.0 Pascals (0.02 in. water gauge) on average relative to adjacent spaces (with doors closed) to prevent the spread of air-borne contaminants to other spaces;
- physically isolated by doors and deck-to-deck partitions or hard lid ceilings.

Not applicable where there are no spaces housing specialized activities.

### 11.3 Lighting Design and Systems (35 points)

#### 11.3.1 Daylighting and Views

11.3.1.1 Regularly occupied floor area achieves a minimum daylight factor (DF) of at least 2 (excluding all direct sunlight penetration).

**Assessment Guidance:**

Estimate the DF for a daylit space that has vertical windows using the following formula:

\[
DF = 0.1 \times PG
\]

where:

- DF = daylight factor
- PG = percentage of glass to floor area (area of the windows/floor area)

- New Building Institute – Advanced Buildings® Daylighting pattern guide:

**Maximum = 5 points**

- Five points are earned where ≥75% of the floor area achieves a DF of 3 or more.
- Four points are earned where ≥50 and <75% of the floor area achieves a DF of 3 or more.
- Three points are earned where ≥25 and <50% of the floor area achieves a DF of 3 or more.
- Two points are earned where ≥75% of the floor area achieves a DF of 2 to <3.
- One point is earned where ≥50 and <75% of the floor area achieves a DF of 2 to <3.
11.3.1.2 Regularly occupied task areas are designed to have *clear views* to the exterior or atria within 25 ft. (7.6 m) from a window.

Maximum = 3 points
- Three points are earned where ≥90% of occupied space has *clear views*.
- Two points are earned where ≥60% and <9% of occupied space has *clear views*.
- One point is earned where ≥40% and <60% of occupied space has *clear views*.
- No points are earned where <40% of occupied space has *clear views*.

11.3.1.3 Southern, western, and eastern exposures have the following shading devices:

- **11.3.1.3.1**: Active automated shading devices (e.g. automated window shades or electrochromic glazing) that automatically adjust based on sky conditions for all listed exposures; OR
- **11.3.1.3.2**: Passive shading devices (e.g. manual window shades or permanent projections such as overhangs).

Maximum = 2 points
- Two points are earned where there are active automated shading devices for the specified exposures.
- One point is earned where there are passive shading devices for the specified exposures.
- No points are earned if there are no shading devices.

11.3.1.4 Daylit areas (with a *Daylight Factor* of at least 2) use photo-sensors to maintain consistent lighting levels throughout the day using both *daylighting* and electric lighting.

Maximum = 2 points
- Two points are earned where >75% of daylit areas use photo-sensors.
- One point is earned where ≥50% and ≤75% of daylit areas use photo-sensors.
- No points are earned if <50% of daylit areas use photo sensors.

11.3.2 Lighting Design Quantity

11.3.2.1 *Regularly occupied spaces* meet the Recommended Illuminance for the Locations/Tasks in Table 11.3.2.1-A and Table 11.3.2.1-B.

“Recommended vertical and horizontal illuminance targets” are found in the *IES Lighting Handbook, 10th Edition, Table 22.2 and Applications Sections 21-37 OR Table 11.3.2.1-A: IES Illuminance Categories and Table 11.3.2.1-B: IES Task/Location Categories*. Lighting levels may be increased or decreased by 10% (max.) based on Occupant Age, Visual Performance Requirements, or other weighting factors as detailed in the *IES Lighting Handbook, 10th Edition Table 4.1,* the following weighting factors:

<table>
<thead>
<tr>

**Informational Reference:**

### 11.3.2.2 Luminance Ratios

Luminance ratios do not exceed the following as per IESNA for tasks:

- 3:1 between the task and adjacent surroundings;
- 10:1 between the task and remote (non-adjacent) surfaces; and
- 20:1 between the brightest and darkest surface in the field of view; or 8:1 between rows of luminaires where there is indirect lighting and where ceiling luminance exceeds 124.1 fl (425 cd/m²).

### 11.3.2.3 The Average Luminance

The average luminance does not exceed the following values for given luminaire angles where there is direct lighting:

- 248.1 fl (850 cd/m²) at 65° from the vertical;
- 102.2 fl (350 cd/m²) at 75° from the vertical; or
- 51.1 fl (175 cd/m²) at 85° from the vertical.

### 11.3.3 Lighting Design Quality

#### 11.3.3.1 Regularly occupied spaces

Use electric light sources with a minimum Color Rendering Index (CRI) of 80.

1 point

#### 11.3.3.2 Regularly occupied spaces

Use electric light sources with a Correlated Color Temperature (CCT) between 2700°K and 4500°K.

1 point or N/A
- Not applicable to specialty retail, medical, or exterior environments.

#### 11.3.3.3 Regularly occupied spaces

Use no more than 50% direct only general lighting. Direct only general lighting limits Direct Glare to no more than 50° above horizontal; Direct Glare includes direct view of the light source and luminances over 2,335 fl (8,000 cd/m²).

2 points

#### 11.3.3.4 Individual control of primary workspace lighting

Individual control of primary workspace lighting is provided for at least 90% of occupants.

“Control” may either be dimming from 100% to at least 10% or continuous dimming of at least 20%.

Maximum = 2 points
- Two points are earned for continuous dimming of at least 20%.
stepped dimming with at least three (3) steps: 100%, 50% and 0%.

11.4 Thermal Comfort (25 points)

### 11.4.1 Thermal Control Zones

#### 11.4.1.1 One or more of the listed thermal zoning strategies is used for continuously occupied areas:

- **11.4.1.1.1: Office Occupancies/Areas:** Includes offices and conference rooms, among others. For open areas, thermal control zones are designed to be between 500 ft\(^2\) (46.5 m\(^2\)) and 1000 ft\(^2\) (92.9 m\(^2\)) for open areas. For single rooms, thermal control zones are designed to be between 750 ft\(^2\) (69.7 m\(^2\)) and 1200 ft\(^2\) (111.5 m\(^2\)). Circulation and support areas are excluded.

- **11.4.1.1.2: Educational Occupancies/Areas:** Includes classrooms, teaching labs, etc. Classrooms AND/OR teaching labs are designed thermal control zones under 1500 ft\(^2\) (139.4 m\(^2\)).

- **11.4.1.1.3: Healthcare Occupancies/Areas:** Includes patient wards, diagnostic and treatment areas. Thermal control zones are designed to be between 500 ft\(^2\) (46.5 m\(^2\)) and 1000 ft\(^2\) (92.9 m\(^2\)).

- **11.4.1.1.4: Open-Area Mercantile and Assembly Occupancies/Areas:** Includes retail, food service, convention halls, etc. For spaces exceeding 464.5 m\(^2\) (5000 ft\(^2\)) thermal control zones are designed to be less than 2500 ft\(^2\) (232.3 m\(^2\)). For spaces between 2500 ft\(^2\) (232.3 m\(^2\)) and 5000 ft\(^2\) (464.5 m\(^2\)) thermal control zones are designed to be less than 1500 ft\(^2\) (139.4 m\(^2\)).

For multiple occupancy types, score each occupancy area and prorate score by floor area (rounding upward to nearest integer to the maximum available total points).

| - Not applicable for other occupancies/areas. |
11.4.2 Thermal Comfort Design

11.4.2.1 The HVAC systems and building are designed to provide a thermal environment in conformance with ANSI/ASHRAE Standard 55-2013, Thermal Environmental Conditions for Human Occupancy. Exceedance hours for regularly occupied spaces do not exceed 300 hours per year. 9 points or N/A
- Not applicable where the occupancy is outside the purview of 55-2013.

11.4.3 Recommended Documentation

- Basis of Design document AND/OR specifications;
- Construction documents;
- Documentation demonstrating compliance with ANSI/ASHRAE Standard 55-2013, including relevant worksheets and report;
- Manufacturer’s specifications, cut sheets, and performance documentation;
- Project specifications;
- Zone plan.

11.5 Acoustic Comfort (20 points)

11.5.1 Airborne Noise Isolation

11.5.1.1 The building design includes at least one of the following acoustic design strategies:
- 11.5.1.1.1: Toilets are located remotely from acoustically separated areas. N/A if there are no toilets;
- 11.5.1.1.2: Acoustically separated areas are located away from noise producing areas such as dance studios, music rooms, cafeterias, indoor swimming pools, mechanical rooms, and gymasia;
- 11.5.1.1.3: Entry doors to rooms opposite each other on the same corridor are staggered;
- 11.5.1.1.4: Through-wall penetrations comply with Annex B of ANSI/ASA S12.60-2010/Part 1;
- 11.5.1.1.5: Walls separating acoustically separated areas from other areas are constructed full height to underside of the next floor above or the roof deck;
- 11.5.1.1.6 Walls separating acoustically separated areas from other areas have all joints between wall panels and penetrations acoustically sealed. Fire-stopping and fire-rated assemblies comply with this requirement; and
- 11.5.1.1.7: Areas with high floor impact activities (e.g. dance studios, shops, gymasia,

Maximum = 4 points
- Four points are earned where four or more of the listed strategies are employed.
- Three points are earned where three of the listed strategies are employed.
- Two points are earned where two of the listed strategies are employed.
- One point is earned where one of the listed strategies is employed.
etc.) are not located above acoustically separated areas.

Informational Reference(s):
- ANSI S12.60-2002
- ASHRAE Handbook – HVAC Applications (Chapter 47)
- ASTM E1374-06

| 11.5.1.2 Design complies with minimum Sound Transmission Class (STC) ratings of floor/ceiling assemblies, walls and doors between acoustically separated areas (e.g. learning spaces), and adjacent spaces as follows and as applicable: |
| Maximum = 2 points. |
| - Two points are earned where two or more of the listed measures is employed. |
| - One point is earned where one of the listed measures is employed. |

| 11.5.1.2.1: STC-45 where the adjacent space is a corridor, stair, office, or conference room; |
| 11.5.1.2.2: STC-50 where the adjacent space is a quiet area, speech clinic, health clinic, classroom, or an exterior wall; or |
| 11.5.1.2.3: Floor Ceiling Assemblies: Designed to meet a minimum STC 50 rating. (Stacked non-critical spaces and spaces connected by an open stairway are exempt). |

| 11.5.2 Sound Masking System |
| 11.5.2.1 The building design incorporates a sound masking system with an overall level specified to an A-weighted decibel (dBA) value within the following spaces and ranges: |
| 3 points |

| Offices: |
| - Open: 45-48dBA |
| - Enclosed: 35-45dBA |
| - Meeting/Conference: 30-45dBA |
| - Circulation: 45-48dBA |

| Healthcare: |
| - Patient room: 40-48dBA |
| - Private offices and exam/treatment room: 35-45dBA |
| - Waiting area: 45-48dBA |
| - Corridor and public spaces: 45-48dBA |
| - Circulation: 45-48dBA |

| Other: |
| - All other areas where speech privacy, concentration, or sleep/relaxation is required: 35-48-dBA |

- The measured overall level is within 0.5dBA of that specified. |
- The measured spectrum conforms to the National Research Council’s COPE Optimum Masking frequency range and 1/3
octave band levels, or the project acoustician’s specified 1/3 octave band levels, within +/-2.0dB.

### 11.5.3 Structure Borne Noise Isolation

<table>
<thead>
<tr>
<th>11.5.3.1 The Impact Insulation Class (IIC) design of all floor-ceiling assemblies has a minimum rating of IIC-50.</th>
<th>1 point</th>
</tr>
</thead>
<tbody>
<tr>
<td>Informational Reference(s):</td>
<td></td>
</tr>
<tr>
<td>• ASTM E989-2012</td>
<td></td>
</tr>
</tbody>
</table>

### 11.5.4 Reverberation Time or Ceiling Noise Reduction Coefficient (NRC)¹

<table>
<thead>
<tr>
<th>11.5.4.1 Either the maximum reverberation time of the room (RT) or the minimum Noise Reduction Coefficient (NRC) rating of the ceiling complies with the following values:</th>
<th>4 points or N/A</th>
</tr>
</thead>
<tbody>
<tr>
<td>• <strong>11.5.4.1.1: Offices:</strong></td>
<td></td>
</tr>
<tr>
<td>o Offices (enclosed): RT 0.6 seconds or NRC 0.75 or NRC 0.70 if floor is carpeted 100%.</td>
<td></td>
</tr>
<tr>
<td>o Offices (open): RT 0.4 seconds or NRC 0.90.</td>
<td></td>
</tr>
<tr>
<td>• <strong>11.5.4.1.2: Schools:</strong></td>
<td></td>
</tr>
<tr>
<td>o School classrooms: RT 0.6 seconds or NRC 0.80 or NRC 0.70 if floor is carpeted 100%.</td>
<td></td>
</tr>
<tr>
<td>o Presentation and meeting spaces: RT 0.5 seconds or NRC 0.80 or NRC 0.70 if floor is carpeted 100%.</td>
<td></td>
</tr>
<tr>
<td>• <strong>11.5.4.1.3: Healthcare:</strong></td>
<td></td>
</tr>
<tr>
<td>o Patient/resident care areas: RT 0.5 seconds or NRC 0.90.</td>
<td></td>
</tr>
<tr>
<td>o Medication safety zones: RT 0.5 seconds or NRC 0.90 or NRC 0.80 if floor is carpeted 100%.</td>
<td></td>
</tr>
<tr>
<td>o Exam/treatment rooms: RT 0.5 seconds or NRC 0.90 or NRC 0.80 if floor is carpeted 100%.</td>
<td></td>
</tr>
<tr>
<td>o Activity/waiting areas: RT 1.5 seconds or NRC 0.75 or 0.70 if floor is carpeted 100%.</td>
<td></td>
</tr>
<tr>
<td>• <strong>11.5.4.1.4: Other:</strong></td>
<td></td>
</tr>
<tr>
<td>o All other spaces where speech intelligibility, concentration, privacy or sleep/relaxation is required: RT 1.0 seconds or NRC 0.80.</td>
<td></td>
</tr>
</tbody>
</table>

¹If the average ceiling height exceeds 12 ft. (3.7 m), the reverberation time increases by half.
time compliance path is used; the NRC compliance path is not permitted. If wall or floor absorption is present, the reverberation time compliance path may permit ceilings with lower NRC values.

### 11.5.5 Mechanical Noise

#### 11.5.5.1 Design complies with background sound levels associated with mechanical systems in accordance with ANSI/ASA S12.2 Standard “Criteria for Evaluating Room Noise” and as follows:

- Airborne sound power levels from HVAC unit do not exceed the Room Criteria detailed in *ASHRAE Systems Application Handbook 2014, Chapter 8, Table 1* for listed spaces when HVAC units are in operation; use 2014 FGI Guidelines for Design and Construction of Health Care Facilities; and
- Spaces are designed such that room background noise using the Room Criteria (RC) ratings complies with *ASHRAE Systems Application Handbook-2014, Chapter 48, Table 1*; use 2014 FGI Guidelines for Healthcare Spaces.

### 11.5.7 Structure Borne HVAC Noise

| 11.5.7.1 Fans and other powered HVAC equipment are acoustically separated from the structure using vibration isolators. | 1 point |

| 11.5.7.2 Ducts are supported on resilient mounts to isolate them from the structural systems, and ducts are isolated using resilient material where they pass through walls. | 1 point |

### 11.5.8 Piping Noise

| 11.5.8.1 With the exception of sprinklers and hydronic systems there is no piping running directly above or adjacent to quiet areas and learning spaces. | 1 point |

### 11.5.9 Electrical System Noise
11.5.9.1 Low-noise ballasts are installed in quiet areas and all other areas where speech intelligibility is important. 1 point

11.5.9.2 Noise from light fixtures and other electrical fixtures does not exceed values indicated in ANSI/ASA S12.60-2010/Part 1. 1 point

11.5.10 Recommended Documentation

- Acoustic mitigation measures for mechanical equipment and plumbing systems;
- Construction documents;
- Description of acoustic design strategies and all design targets;
- FLIC value for flooring assemblies;
- Manufacturer’s specifications, cut sheets, and performance documentation;
- Sound level measurements taken at the property line;
- Specification which includes Annex E of ANSI S12.60 – 2010;

Note that the Foreword, Appendix, Informational References and Recommended Documentation are informative only and do not contain mandatory requirements necessary for conformance to this Standard. As such, they may contain material that has not been subjected to public review or a consensus process.

Reference documents cited within the Standard are mandatory unless they are clearly identified as being Informational References. Referenced documents are only to be applied within the context for which they are cited.
